WHO 2022 Update on the Classifications of Urinary Tract Neoplasms

George J. Netto, M.D.

Professor and Chair of Pathology

University of Alabama at Birmingham

WHO 2022 Update on the Classifications of Urinary Tract Neoplasms

I have the following financial relationships to disclose:

TERT Promoter Mutations in Urothelial Neoplasia
Patents: (US201660208340A1) (PCT/US2014/051808)

UroSEEK; **CancerSEEK; PapSEEK**

- Methods and Materials for Assessing and Treating Cancer
  Patents: (US16/250,703) (PCT/US2018/045669)
- Financial Interest in "**Thrive Early Detection Corp" and "Exact Sciences Inc"**

Genentech Advisory Pathology Board

I will not discuss off label use and/or investigational use in my presentation

WHO Classification of the Urinary and Male Genital Tumours

5th edition series

- WHO *5th edition series* **structural reorganization**
- Refinements of **terminology** and **classification**
- Precursor lesions **(Dysplasia, UPUMP)**
- **Grading / Staging/ Urine Cytology**
- **Intrinsic Molecular Subtypes** of UC

WHO Classification of the Urinary and Male Genital Tumours

5th edition series

- WHO *5th edition series* **structural reorganization**
- Refinements of **terminology** and **classification**
- Precursor lesions **(Dysplasia, UPUMP)**
- **Grading / Staging/ Urine Cytology**
- **Intrinsic Molecular Subtypes** of UC

WHO Classification of the Urinary and Male Genital Tumours
4th edition series

Urothelial tumours	
Infiltrating urothelial carcinoma	8120/3
Nested, including large nested	
Microcystic	
Micropapillary	8131/3
Lymphoepithelioma-like	8082/3
Plasmacytoid / signet ring cell / diffuse	
Sarcomatoid	8122/3
Giant cell	8031/3
Poorly differentiated	8020/3
Lipid-rich	
Clear cell	
Non-invasive urothelial neoplasms	
Urothelial carcinoma in situ	8120/2
Non-invasive papillary urothelial carcinoma, low-grade	8130/2
Non-invasive papillary urothelial carcinoma, high-grade	8130/2
Papillary urothelial neoplasm of low malignant potential	8130/1
Urothelial papilloma	8120/0
Inverted urothelial papilloma	8121/0
Urothelial proliferation of uncertain malignant potential	
Urothelial dysplasia	
Squamous cell neoplasms	
Pure squamous cell carcinoma	8070/3
Verrucous carcinoma	8051/3
Squamous cell papilloma	8052/0
Glandular neoplasms	
Adenocarcinoma, NOS	8140/3
Enteric	8144/3
Mucinous	8480/3
Mixed	8140/3
Villous adenoma	8261/0
Urachal carcinoma	8010/3
Tumours of Müllerian type	
Clear cell carcinoma	8310/3
Endometrioid carcinoma	8380/3

Neuroendocrine tumours	
Small cell neuroendocrine carcinoma	8041/3
Large cell neuroendocrine carcinoma	8013/3
Well-differentiated neuroendocrine tumour	8240/3
Paraganglioma	8693/1
Melanocytic tumours	
Malignant melanoma	8720/3
Naevus	8720/0
Melanosis	
Mesenchymal tumours	
Rhabdomyosarcoma	8900/3
Leiomyosarcoma	8890/3
Angiosarcoma	9120/3
Inflammatory myofibroblastic tumour	8825/1
Perivascular epithelioid cell tumour	
Benign	8714/0
Malignant	8714/3
Solitary fibrous tumour	8815/1
Leiomyoma	8890/0
Haemangioma	9120/0
Granular cell tumour	9580/0
Neurofibroma	9540/0
Urothelial tract haematopoietic and lymphoid tumours	
Miscellaneous tumours	
Carcinoma of Skene, Cowper, and Littre glands	8140/3
Metastatic tumours and tumours extending from other organs	
Epithelial tumours of the upper urinary tract	
Tumours arising in a bladder diverticulum	
Urothelial tumours of the urethra	

The morphology codes are from the International Classification of Diseases for Oncology (ICD-O) [917A]. Behaviour is coded /0 for benign tumours; /1 for unspecified, borderline, or uncertain behaviour; /2 for carcinoma in situ and grade III intraepithelial neoplasia; and /3 for malignant tumours. The classification is modified from the previous WHO classification [756A], taking into account changes in our understanding of these lesions.

WHO Classification of the Urinary and Male Genital Tumours
5th edition series

Urothelial Tumours
Non-Invasive Urothelial Neoplasia
Urothelial papilloma
Inverted urothelial papilloma
Papillary urothelial neoplasm of low malignant potential
Non-invasive papillary urothelial carcinoma, low-grade
Non-invasive papillary urothelial carcinoma, high-grade
Urothelial carcinoma in situ
Invasive Urothelial Neoplasia
Invasive urothelial carcinoma
Squamous cell neoplasms
Urothelial squamous cell papilloma
Verrucous carcinoma of the bladder
Pure urothelial squamous cell carcinoma
Glandular neoplasms
Adenomas
Villous adenoma
Adenocarcinomas
Adenocarcinoma NOS
Urachal and diverticular neoplasms
Urachal carcinoma
Diverticular carcinoma
Urethral neoplasms
Urethral accessory gland carcinomas
Littre gland carcinoma of the urethra
Skene gland carcinoma of the urethra
Cowper gland carcinoma of the urethra
Tumours of Mullerian type
Clear cell adenocarcinoma
Endometrioid carcinoma

WHO Classification of the Urinary and Male Genital Tumours

5th edition series

- WHO *5th edition series* **structural reorganization**
- Refinements of **terminology** and **classification**
- Precursor lesions **(Dysplasia, UPUMP)**
- **Grading / Staging/ Urine Cytology**
- **Intrinsic Molecular Subtypes** of UC

WHO Classification of the Urinary and Male Genital Tumours
5th edition series

Terminology scheme across the WHO 5th edition:

- *The term **"subtype"** to replace **"variant"** for a distinct clinical or morphologic category within a **tumour type***
- *The term **"variant"** is reserved for **genomic rather than morphologic** alterations*

Subtypes of Urothelial Carcinoma are **morphologically distinct and have prognostic significance** (management implications)

WHO URO 4

Urothelial tumours

Infiltrating Urothelial Carcinoma

Histologic Variants

Nested, including large nested
Microcystic
Micropapillary
Lymphoepithelioma-like
Plasmacytoid/signet ring cell/diffuse
Sarcomatoid
Giant cell
Poorly differentiated
Lipid rich
Clear cell

WHO URO 5

Urothelial tumours

Invasive Urothelial Carcinoma

Histologic Subtypes of Urothelial Carcinoma

Nested
Large Nested
Tubular and Microcystic
Micropapillary
Lymphoepithelioma-like
Plasmacytoid
Sarcomatoid
Giant cell
Poorly differentiated
Lipid rich
Clear cell (Glycogen Rich)

Urothelial Carcinoma with Divergent Differentiation

UC with Squamous Differentiation
UC with Glandular Differentiation
UC with Trophoblatic Differentiation
UC with Mullerian Differentiation (Clear Cell Adenocarcinoma)

WHO Classification of the Urinary and Male Genital Tumours
5th edition series

- A single Urothelial Carcinoma lesion can display admixture of conventional urothelial, **histologic subtypes**, and areas of **divergent differentiation**

- A listing and attempt to **quantify** the various components is required

Histologic Subtypes of Invasive Urothelial Carcinoma

Nested

Tubular and Microcystic

Large Nested

Histologic Subtypes of Invasive Urothelial Carcinoma
Nested

“Cancer Resembling Von Brunn Nests”

- *Talbert ML, Young RH. Am J Surg Pathol 1989;13:374*
  Carcinomas of the urinary bladder with deceptively benign-appearing foci: a report of three cases.

- *Murphy WM, Deana DG. Mod Pathol 1992;5:240-3*
  The nested variant of transitional cell carcinoma: a neoplasm resembling proliferation of Brunn’s nests.

Histologic Subtypes of Invasive Urothelial Carcinoma
Nested

- **RARE** less than 1% of invasive bladder carcinomas

Location

- Anywhere in the bladder
- **Rare in upper tract**

Cystoscopy

- Widely variable appearance: flat tumor, papillary tumor, submucosal **“bump”**
- Tumor size: 1-8 cm.

UC Nested Subtype
Prognosis

- Clinical course generally aggressive

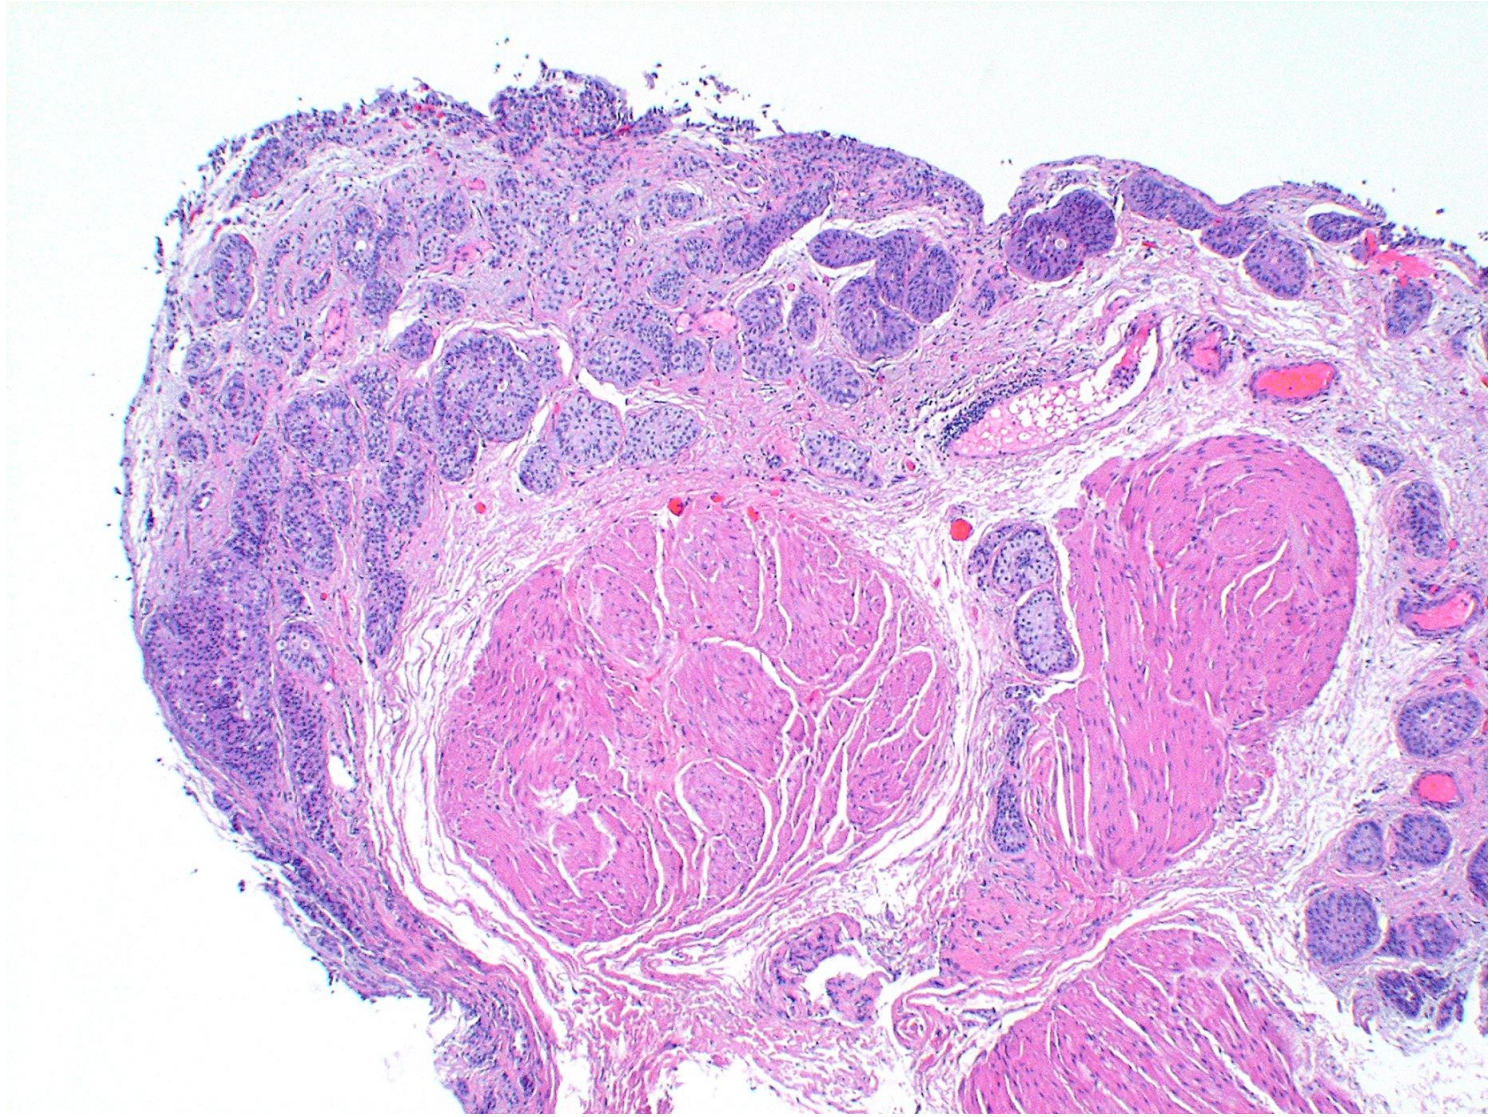
***Drew et al. Mod Pathol 1996*:**
- Review of 24 cases, 60% show aggressive behavior, **mortality rates similar to high grade UrCa**

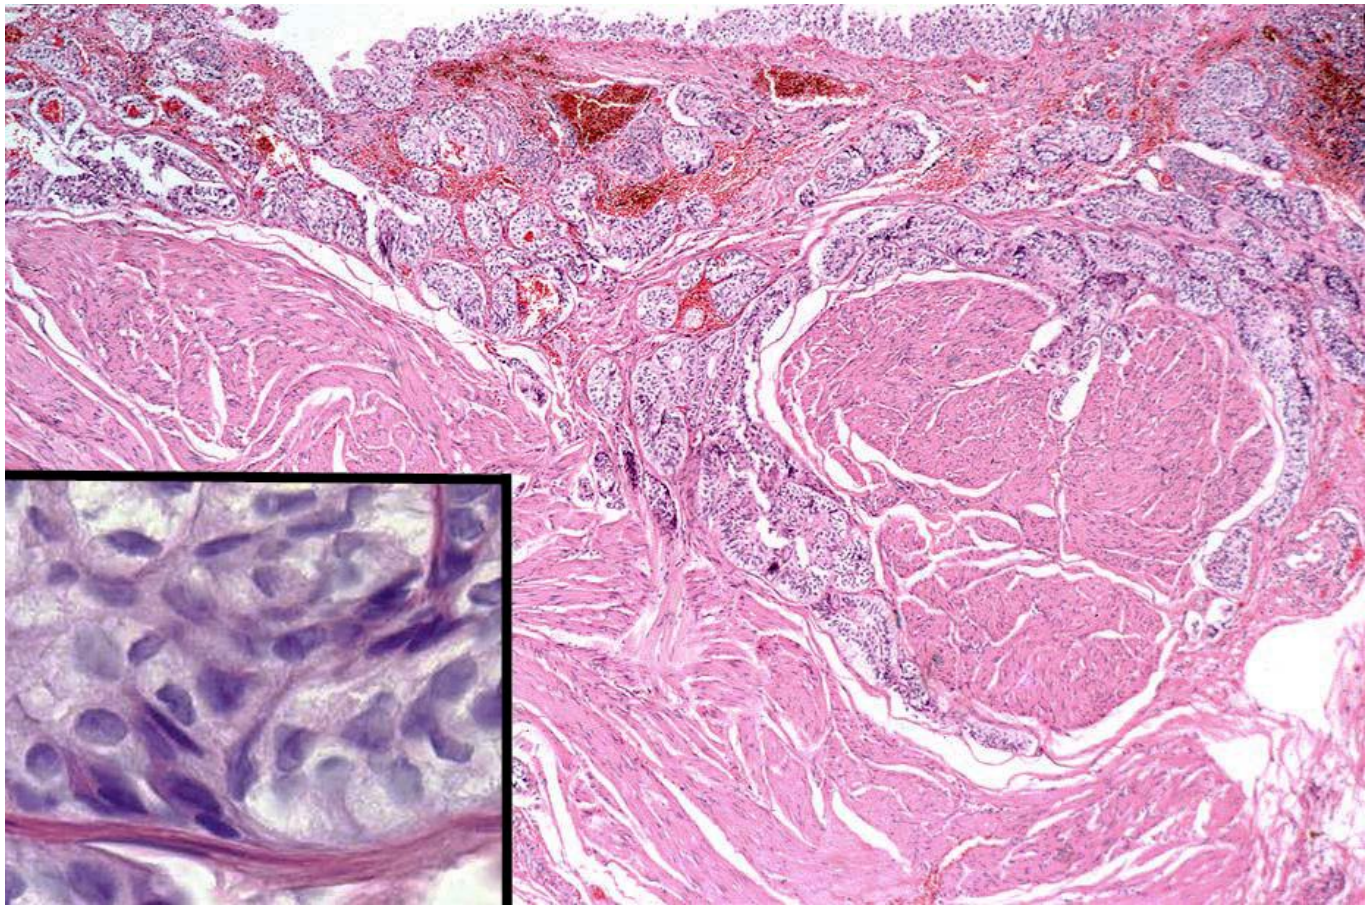
- Only 3/12 **(25%)** nested variant alive without disease (DFS) at 16 months follow-up

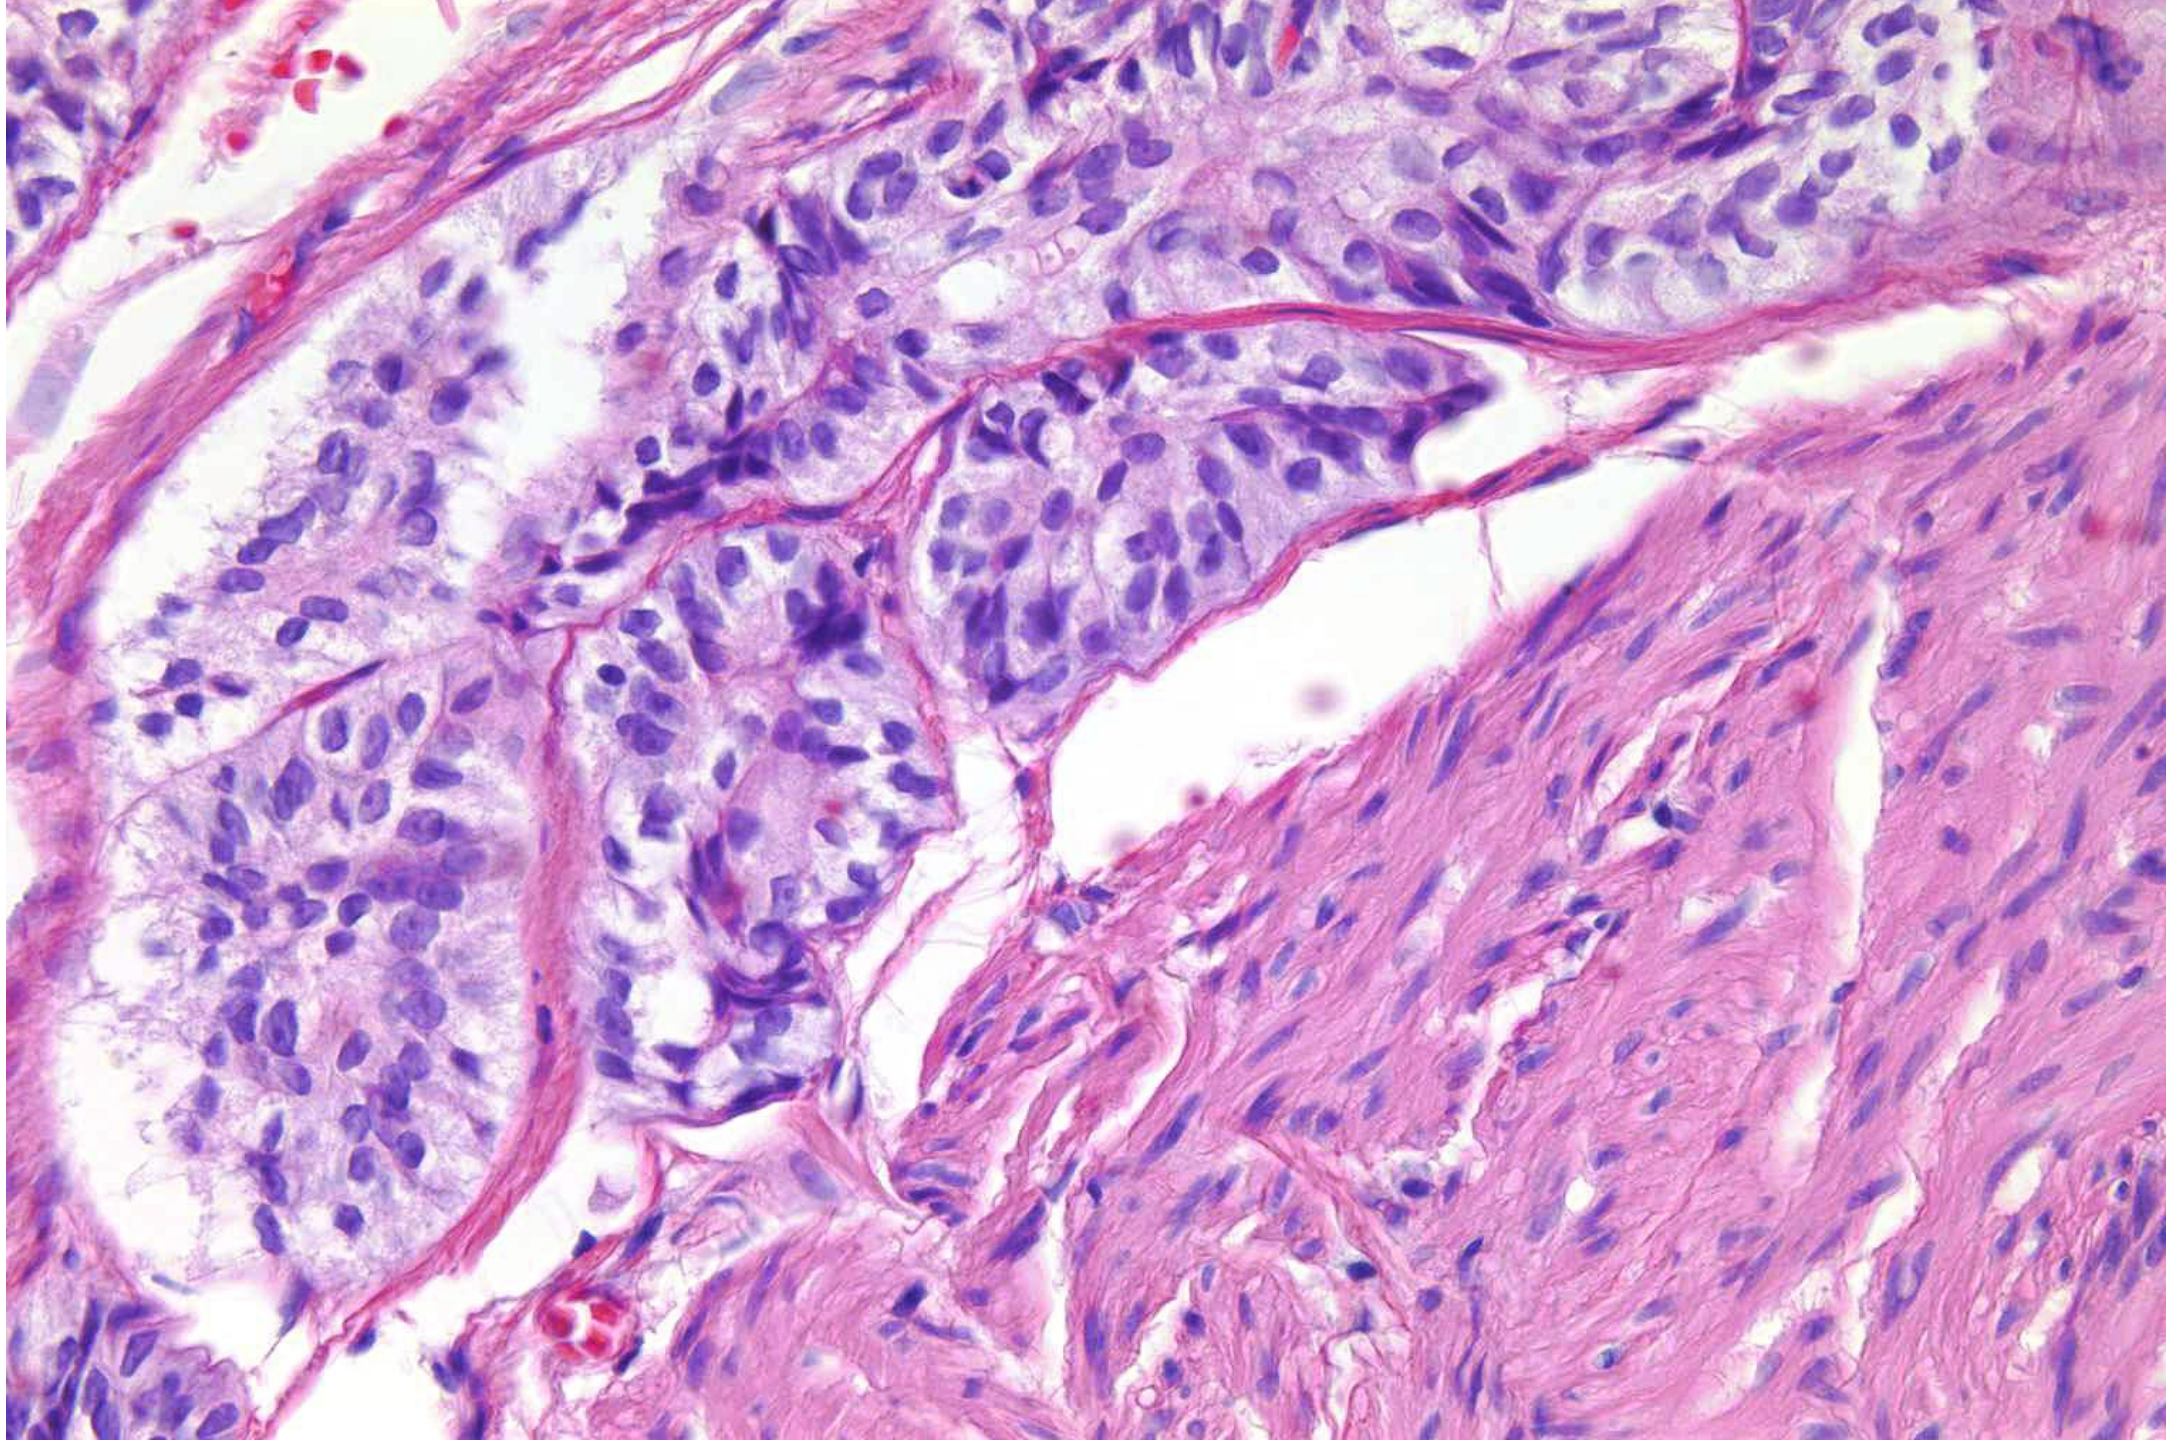
UC Nested Subtype

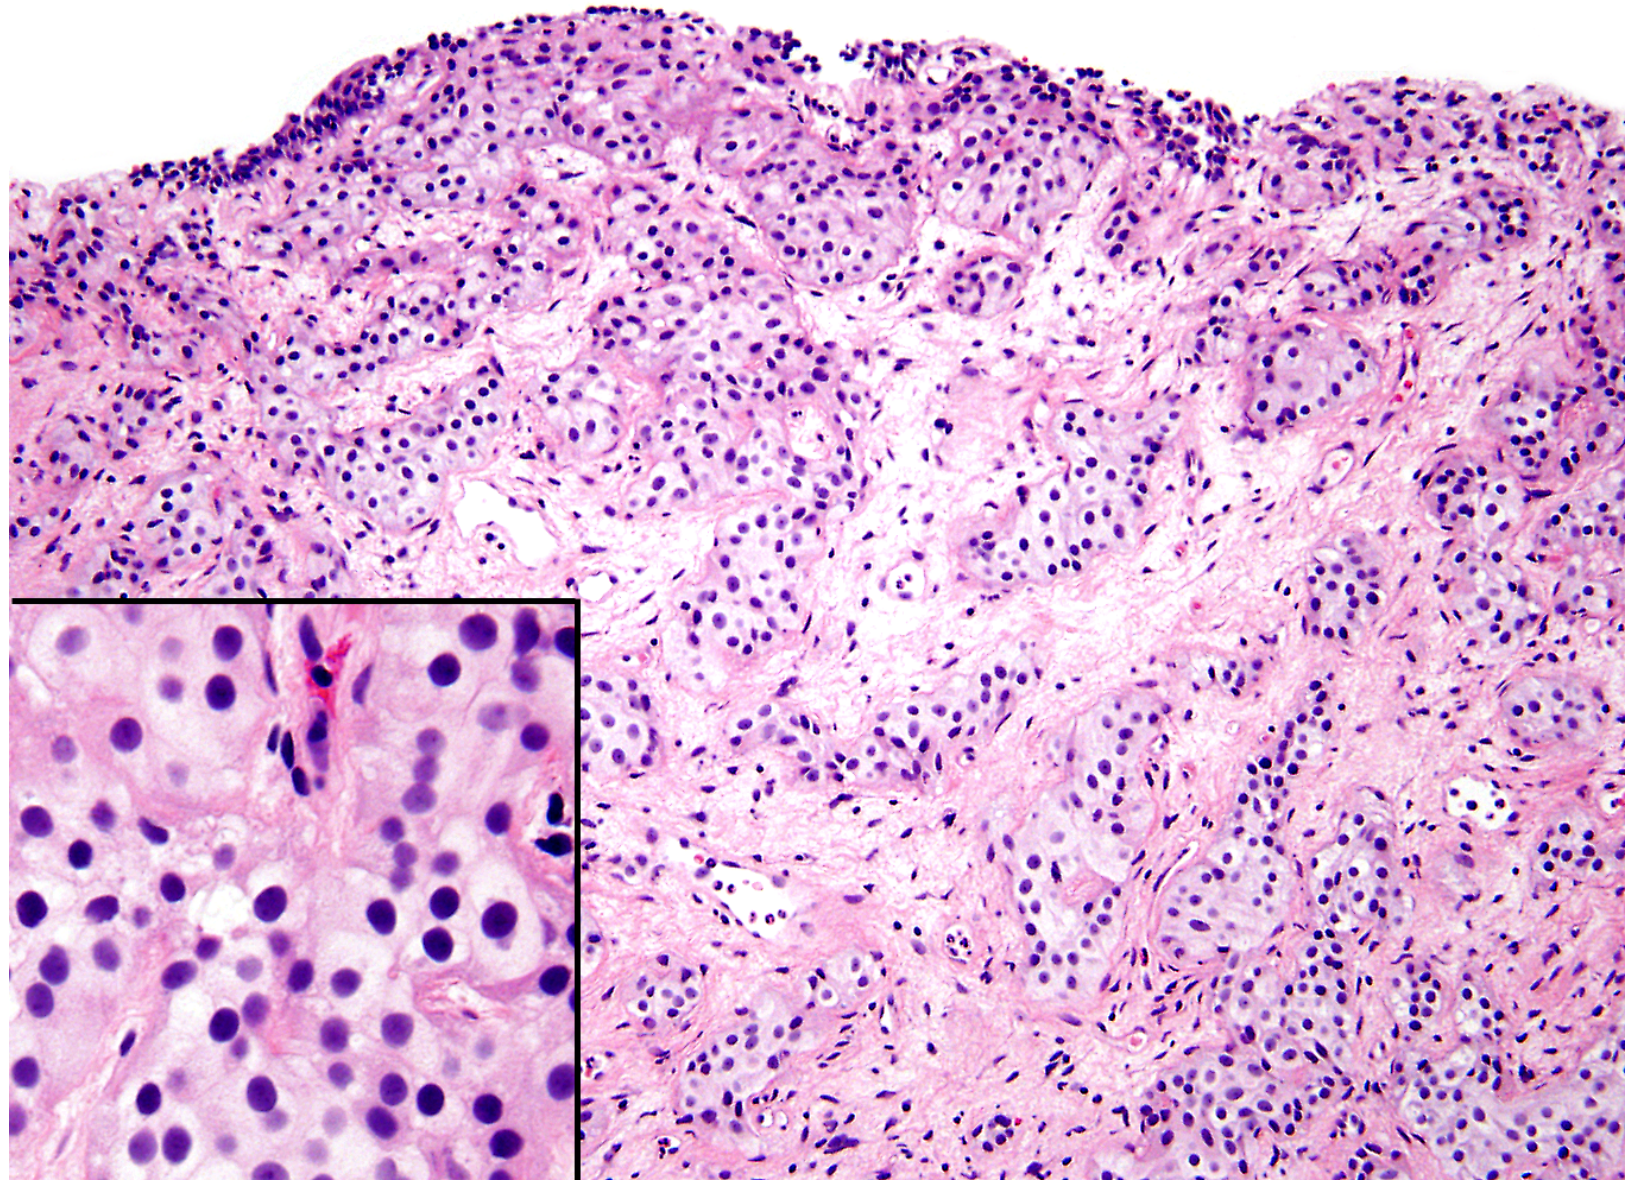
- **Small closely packed nests** of epithelial cells **irregularly infiltrating** lamina propria, at times anastomosing confluent nests
- Can be mixed with microcystic, tubular, and trabecular structures

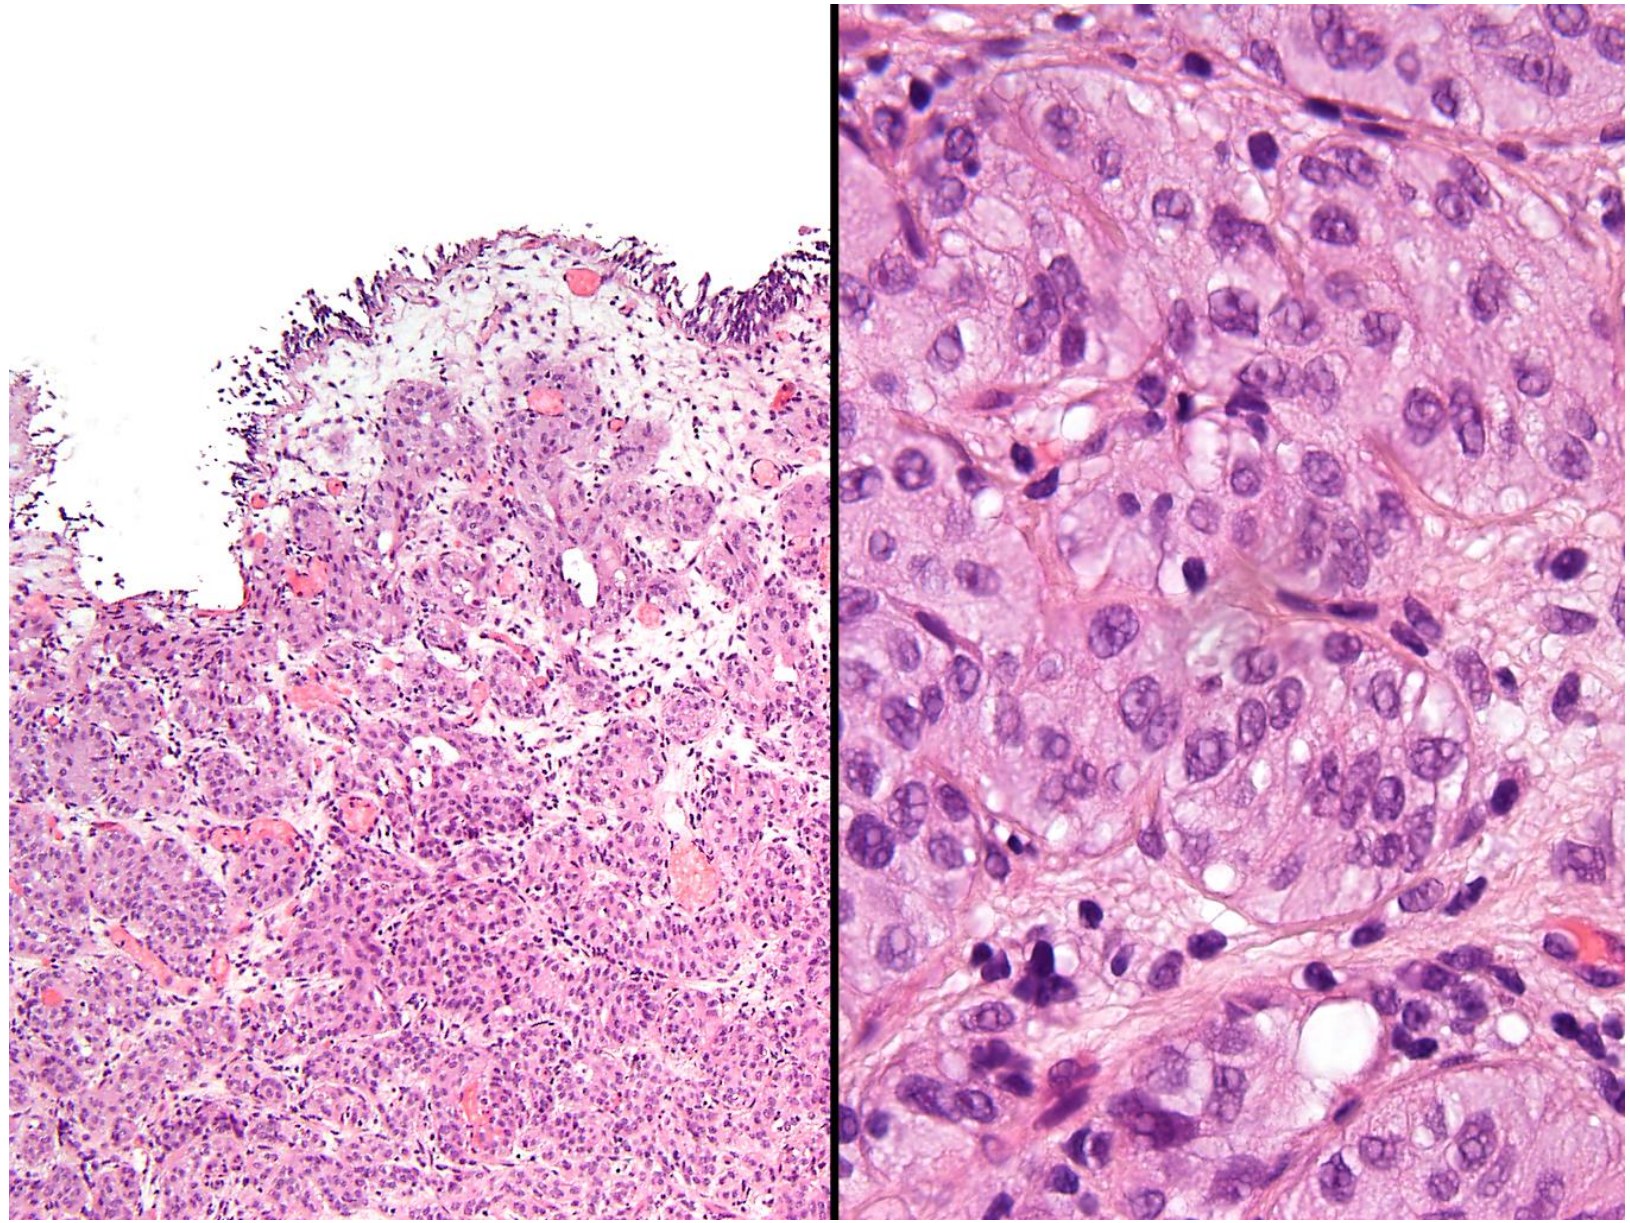
- **Histologically Difficult to Diagnose**
  - Very bland cells with only focal moderate atypia
  - Overlying urothelium may be normal
  - **Deep irregular infiltrative** pattern
  - **Identify muscularis propria invasion**

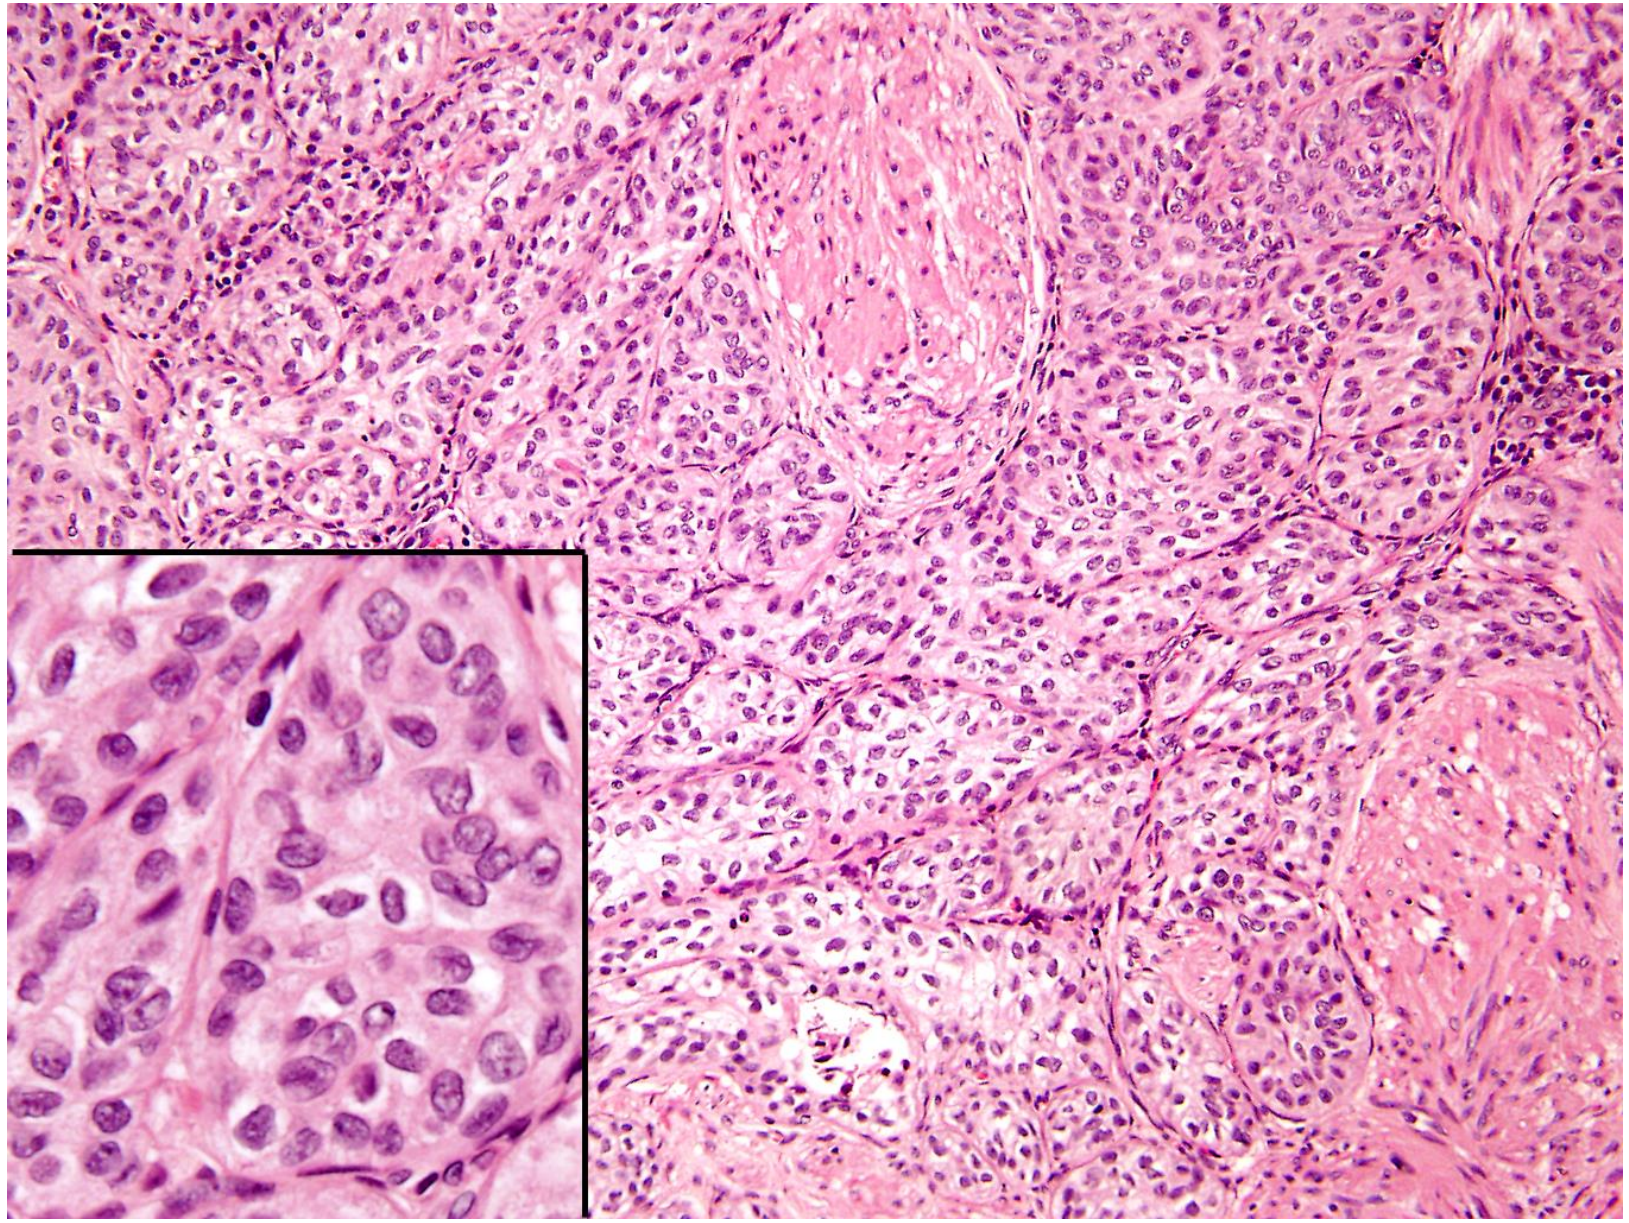


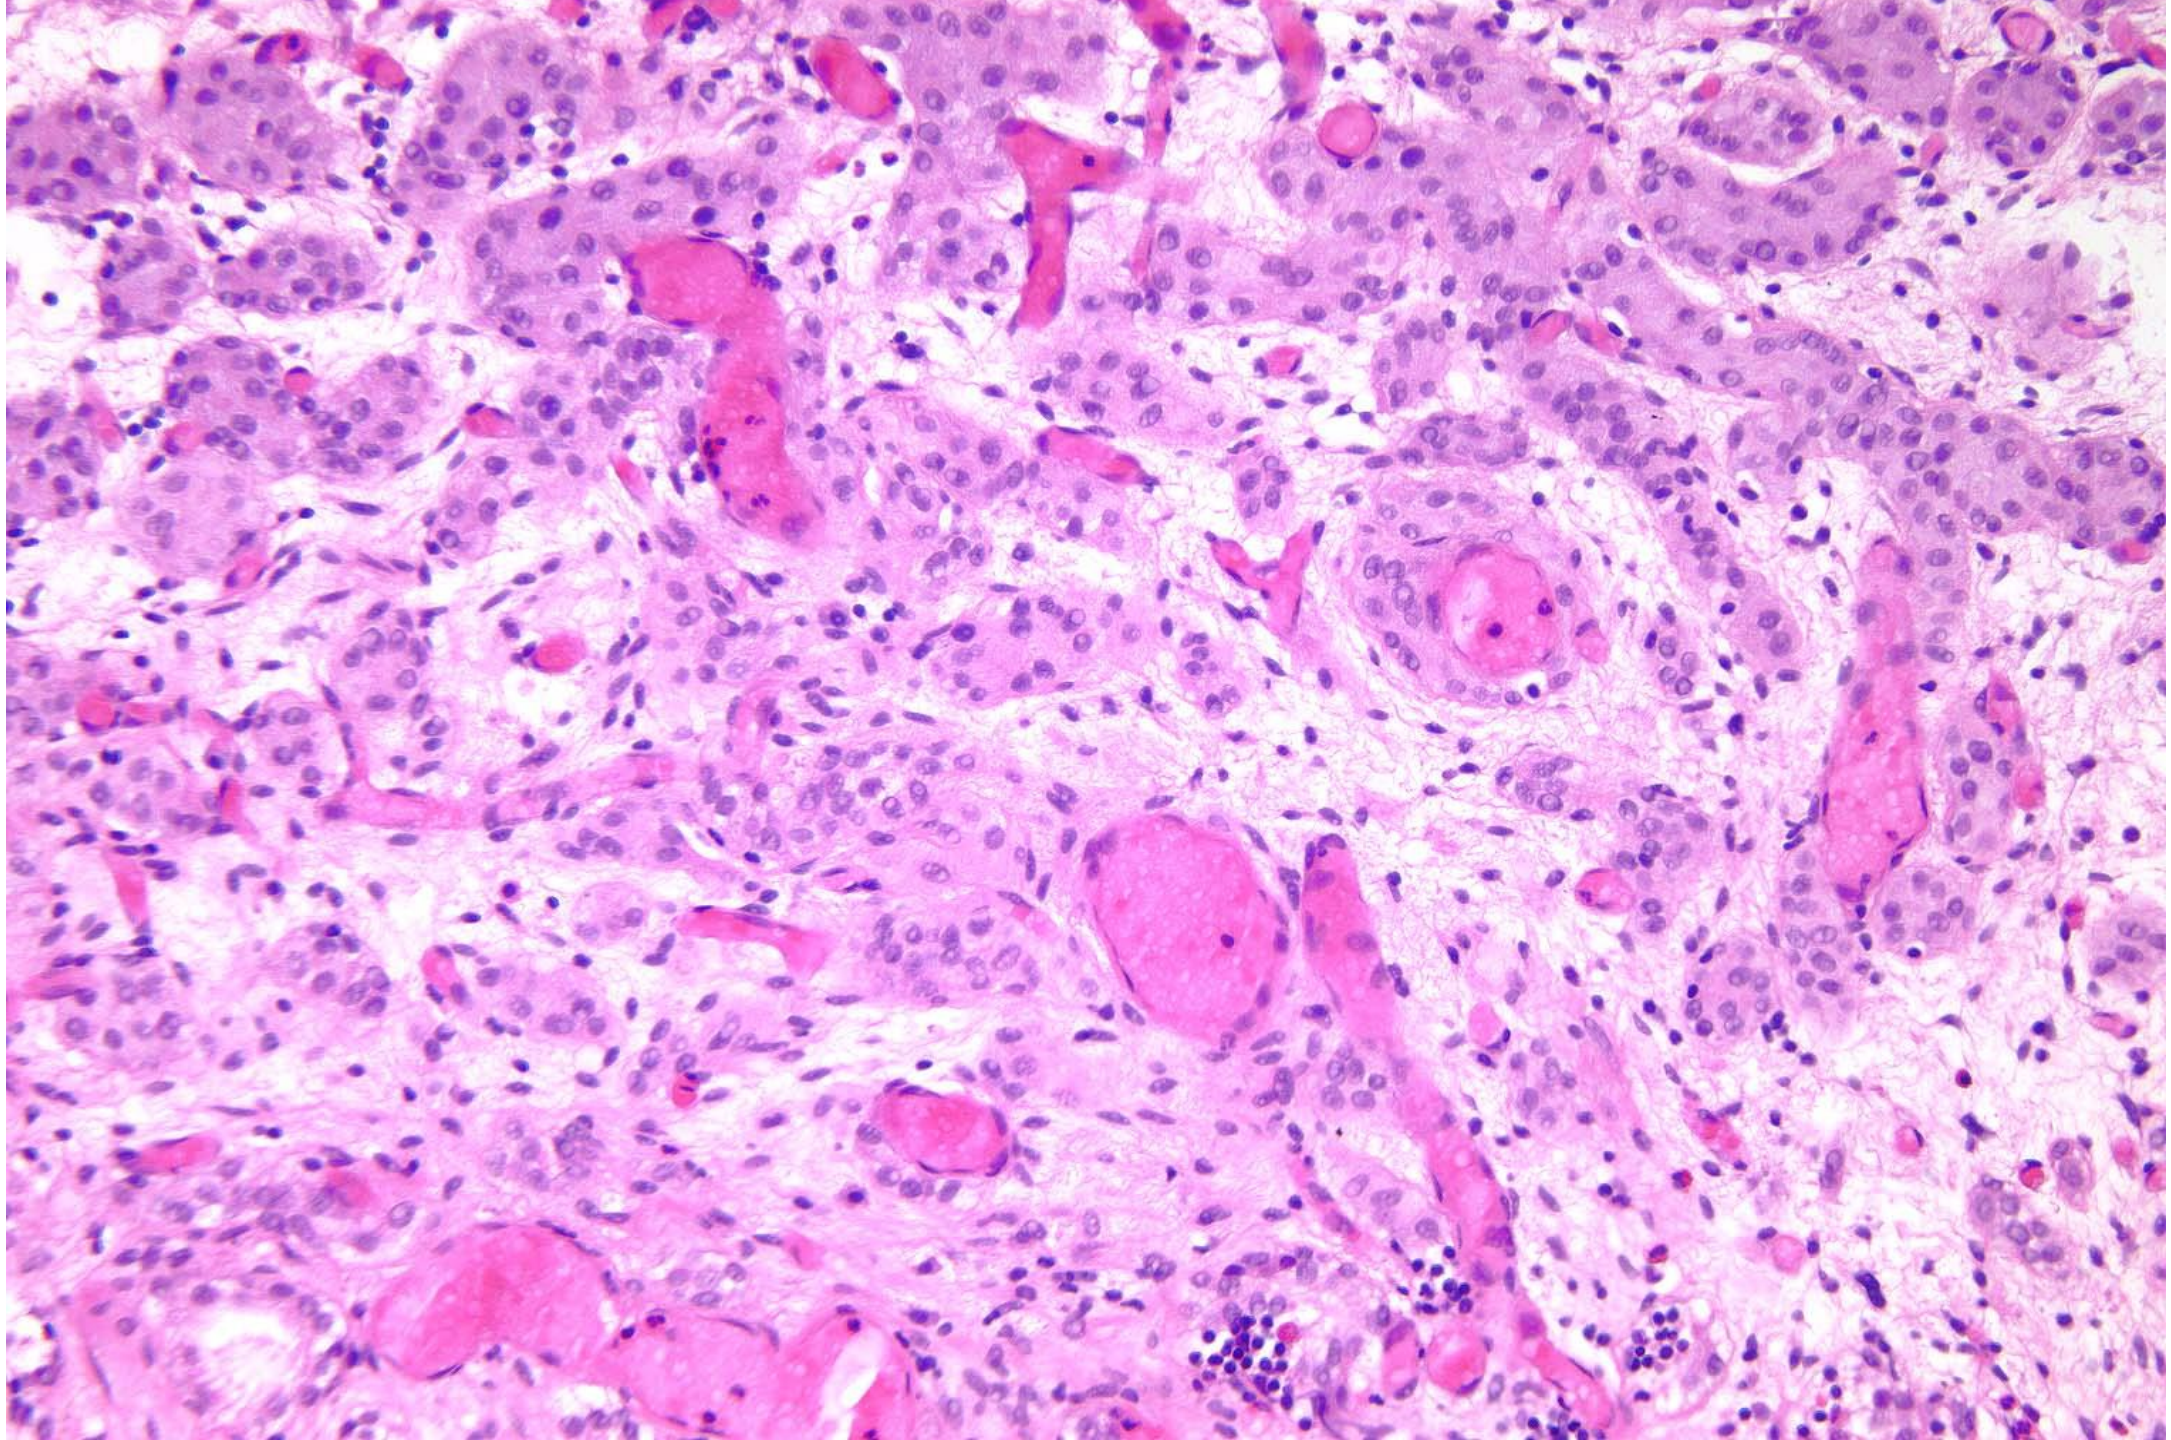




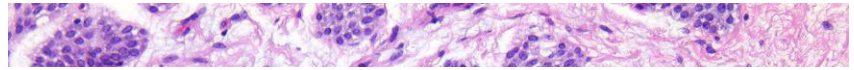


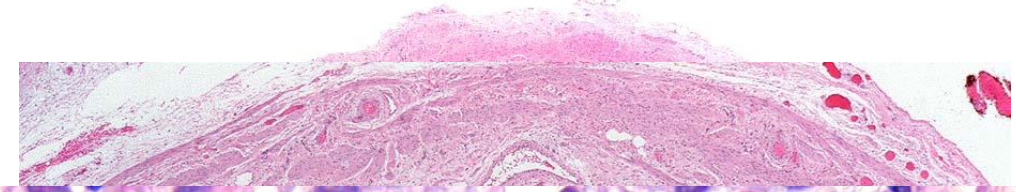


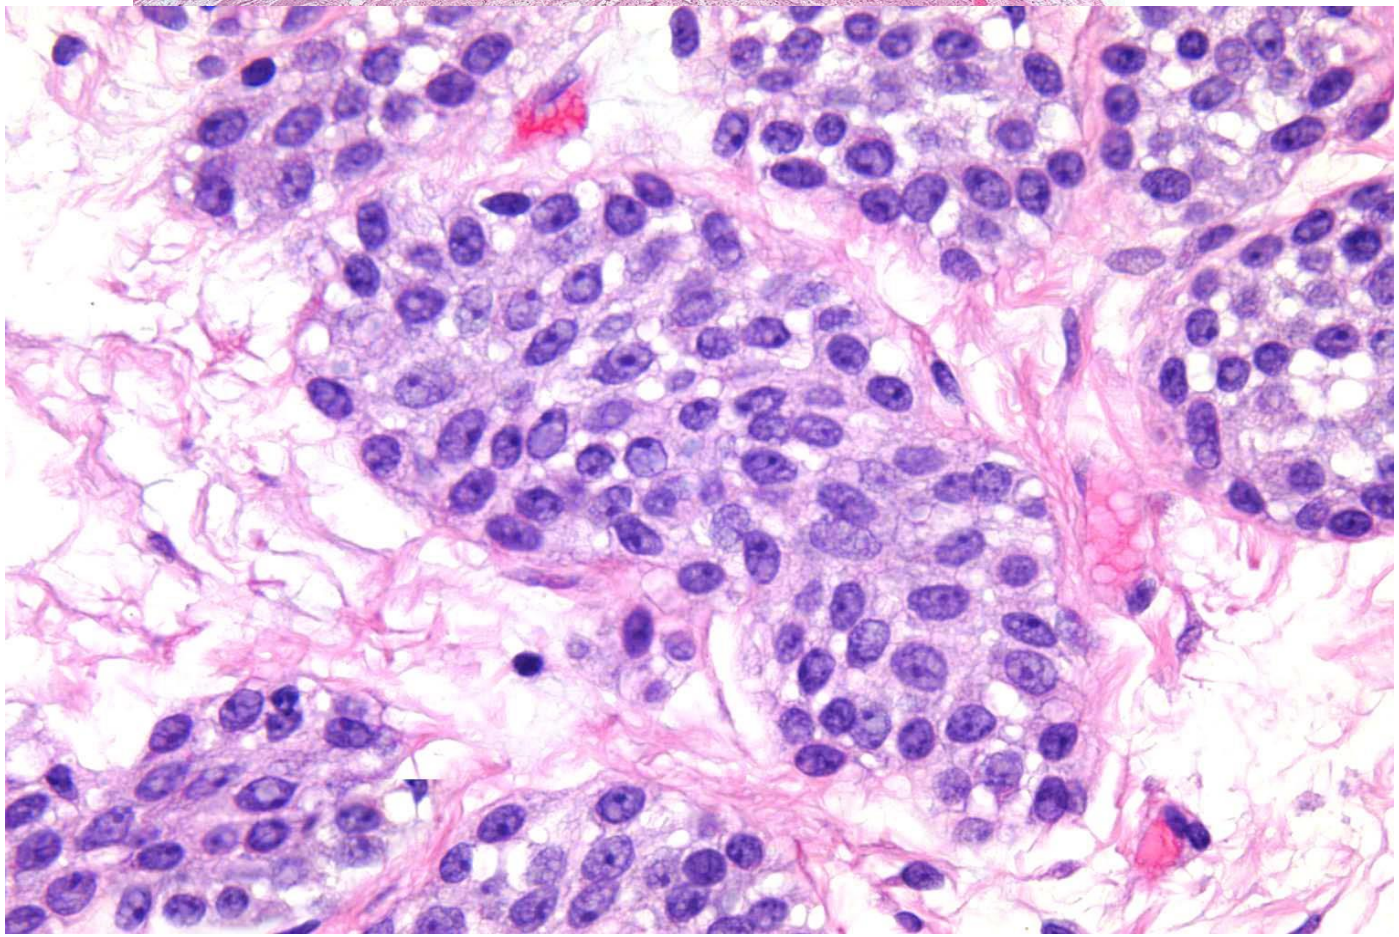




Urothelial Nested Architecture
DDX







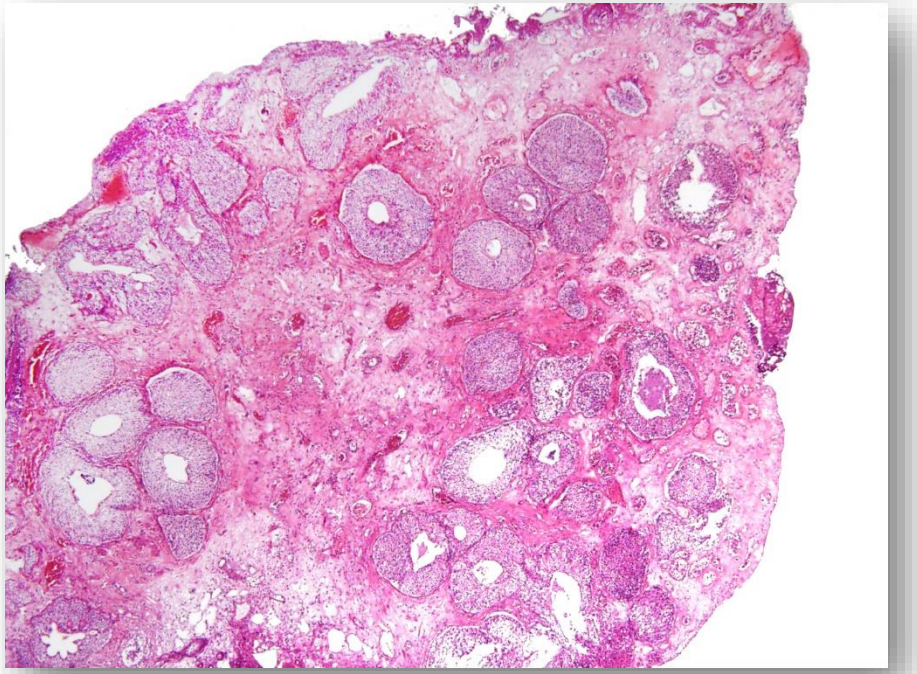
UC Nested Subtype

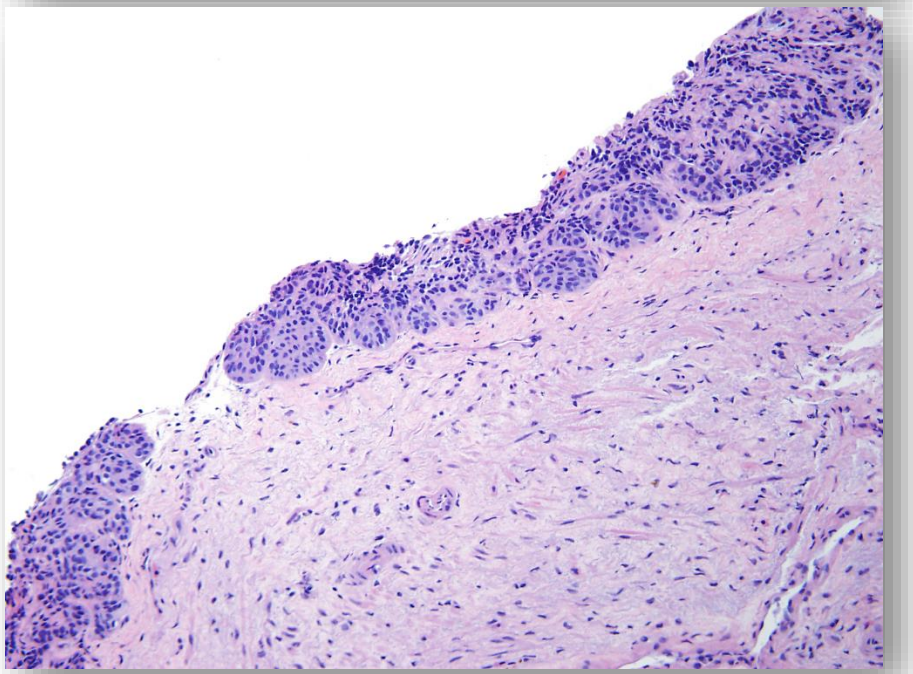
DDx

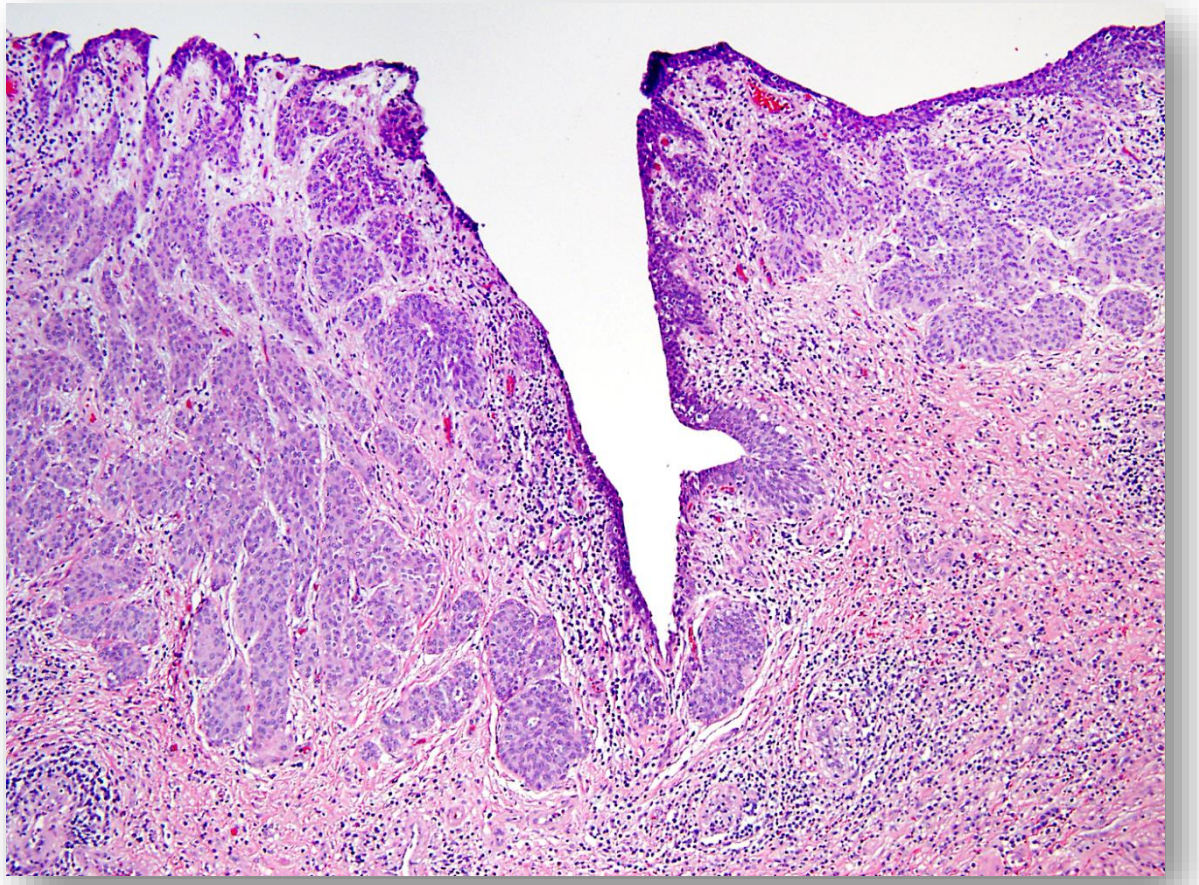
Proliferation of Von Brunn Nests

- Deep irregular infiltrative pattern
- Identify muscularis propria invasion

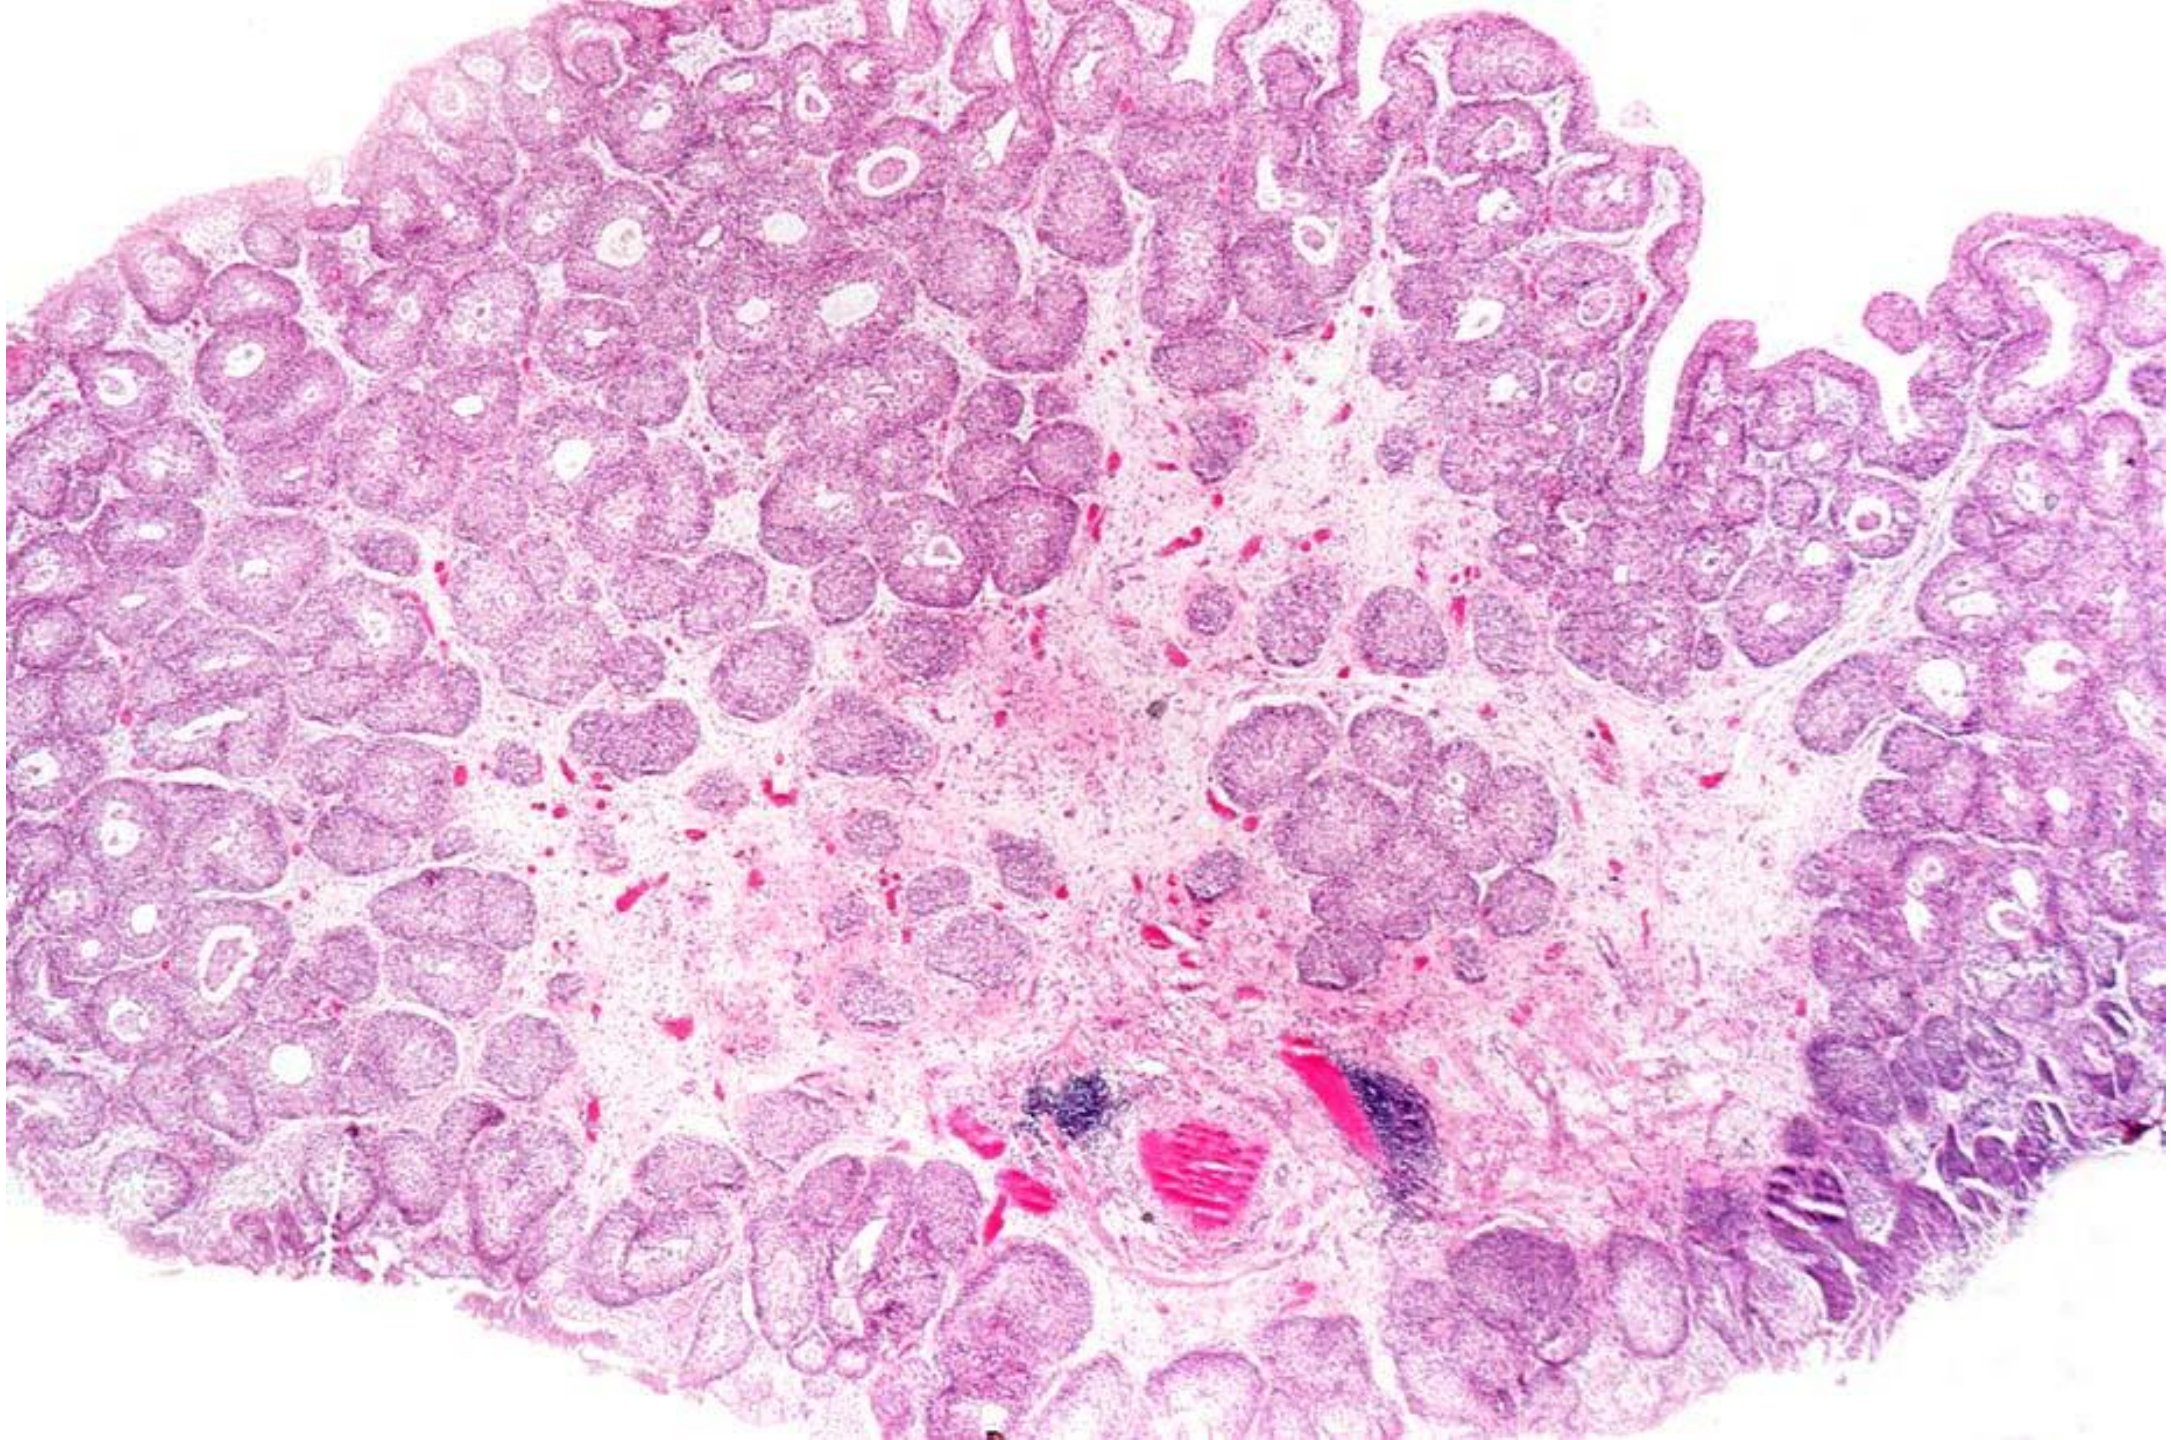
- *TERT* promoter mutation







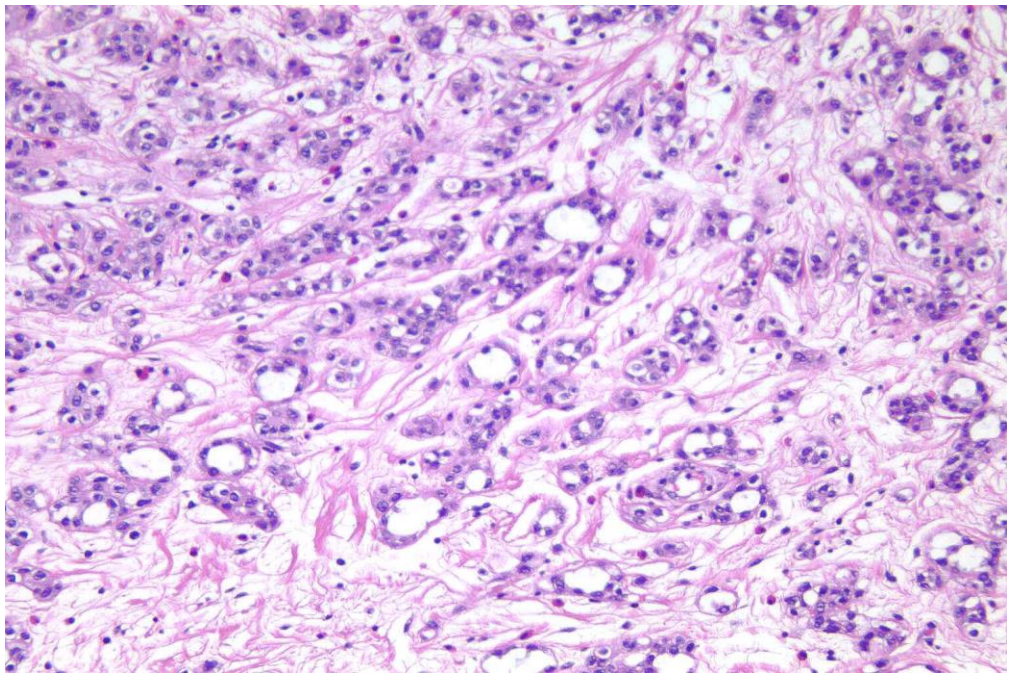
Urinary Bladder
Florid Proliferation of Von Brunn Nests



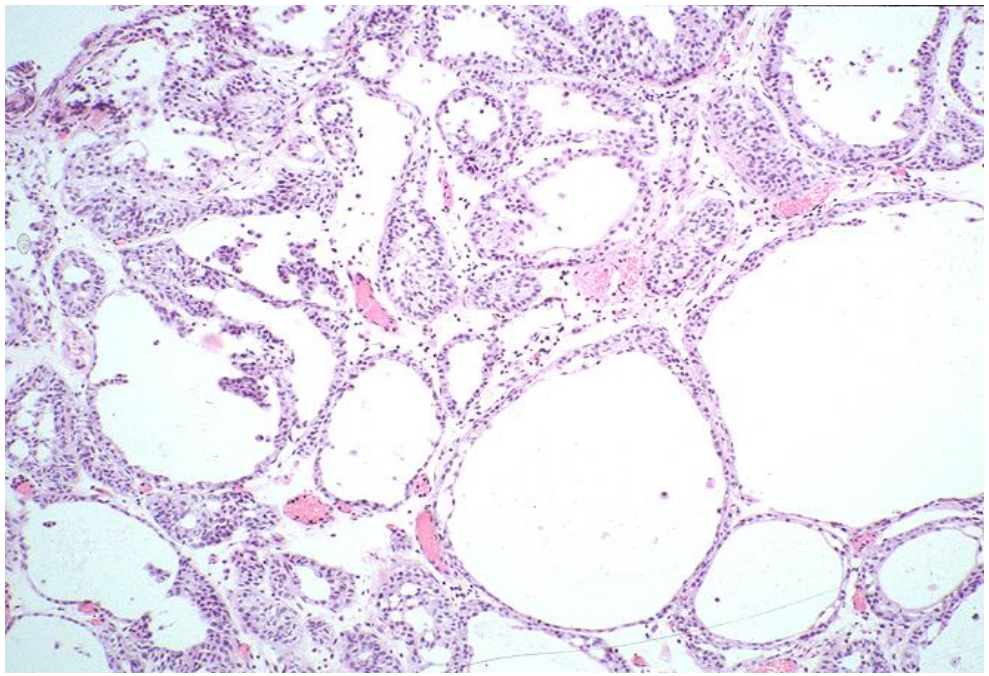
Urothelial Carcinoma
Tubular and Microcystic Subtypes

- **Closely related** to their nested counterpart
- **Bland cells** line small tubular or microcystic structures
- **DDx Cystitis Cystica**
  Like nested subtype, **deep irregular infiltration** & involvement of **muscularis propria** are clues
- Urothelial markers typically positive (GATA3 or p63)

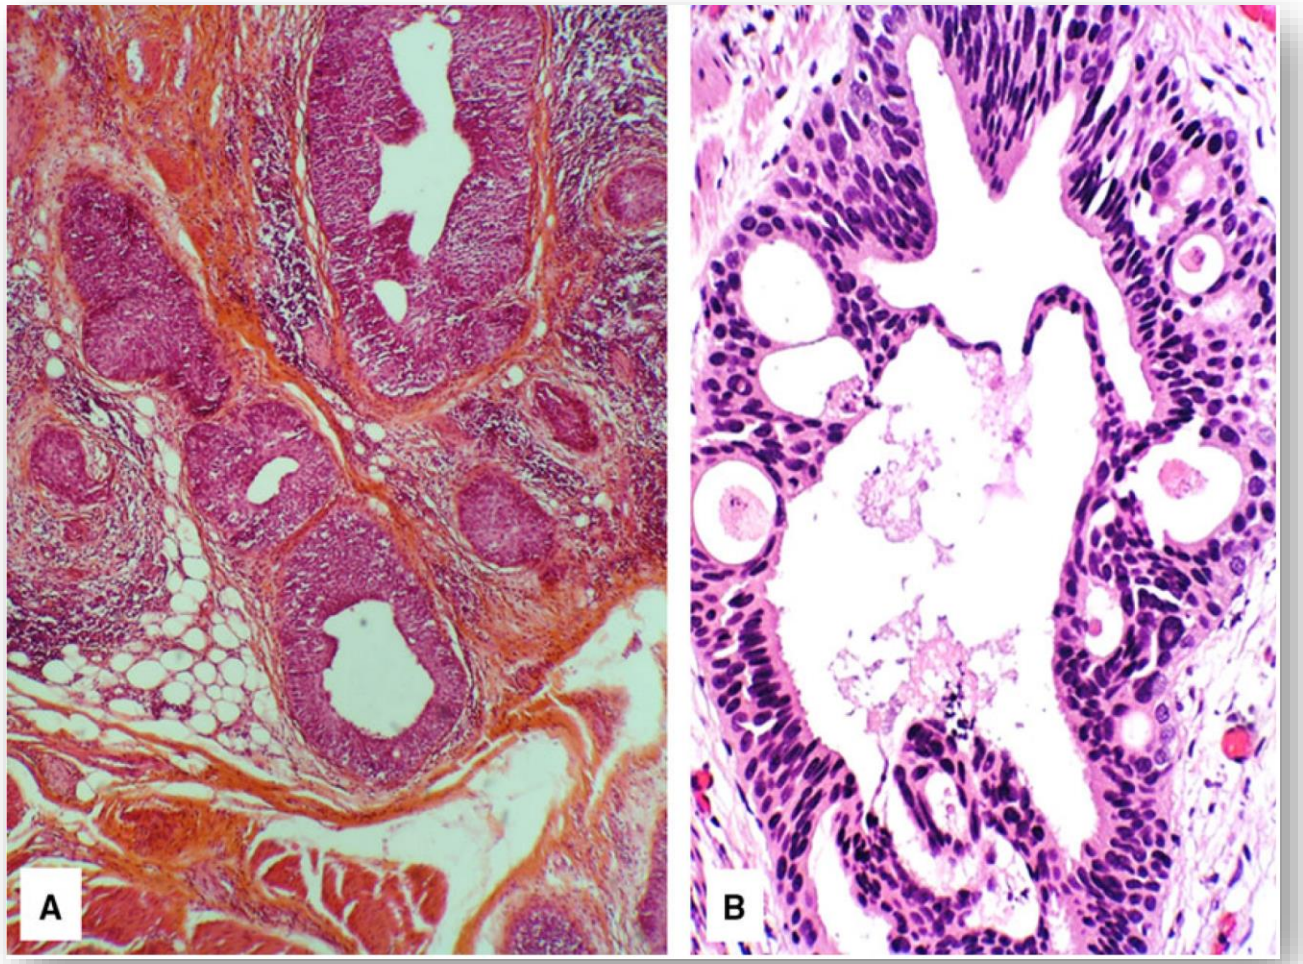
Paner GP…Amin MB: Hum Pathol 2014
Mai KT et al: Pathology International 2014
Lopez Beltran et al.: Histopathology. 2019



Tubular Subtype



Microcystic Subtype



Microcystic Subtype

Lopez Beltran et al.: Histopathology. 2019

Large Nested Variant of Urothelial Carcinoma: 23 Cases Mimicking von Brunn Nests and Inverted Growth Pattern of Noninvasive Papillary Urothelial Carcinoma

Roni Cox, MD and Jonathan I. Epstein, MD*† ‡* Am J Surg Pathol 2011

Histopathology

Histopathology 2017, 71, 703–710. DOI: 10.1111/his.13280

Large nested variant of urothelial carcinoma: a clinicopathological study of 36 cases

Eva Compérat,[1] Jesse K McKenney,[2] Arndt Hartmann,[3] Ondrej Hes,[4] Simone Bertz,[3] Justine Varinot[1] & Fadi Brimo[5]

Large nested variant of urothelial carcinoma: a clinicopathological study of 36 cases

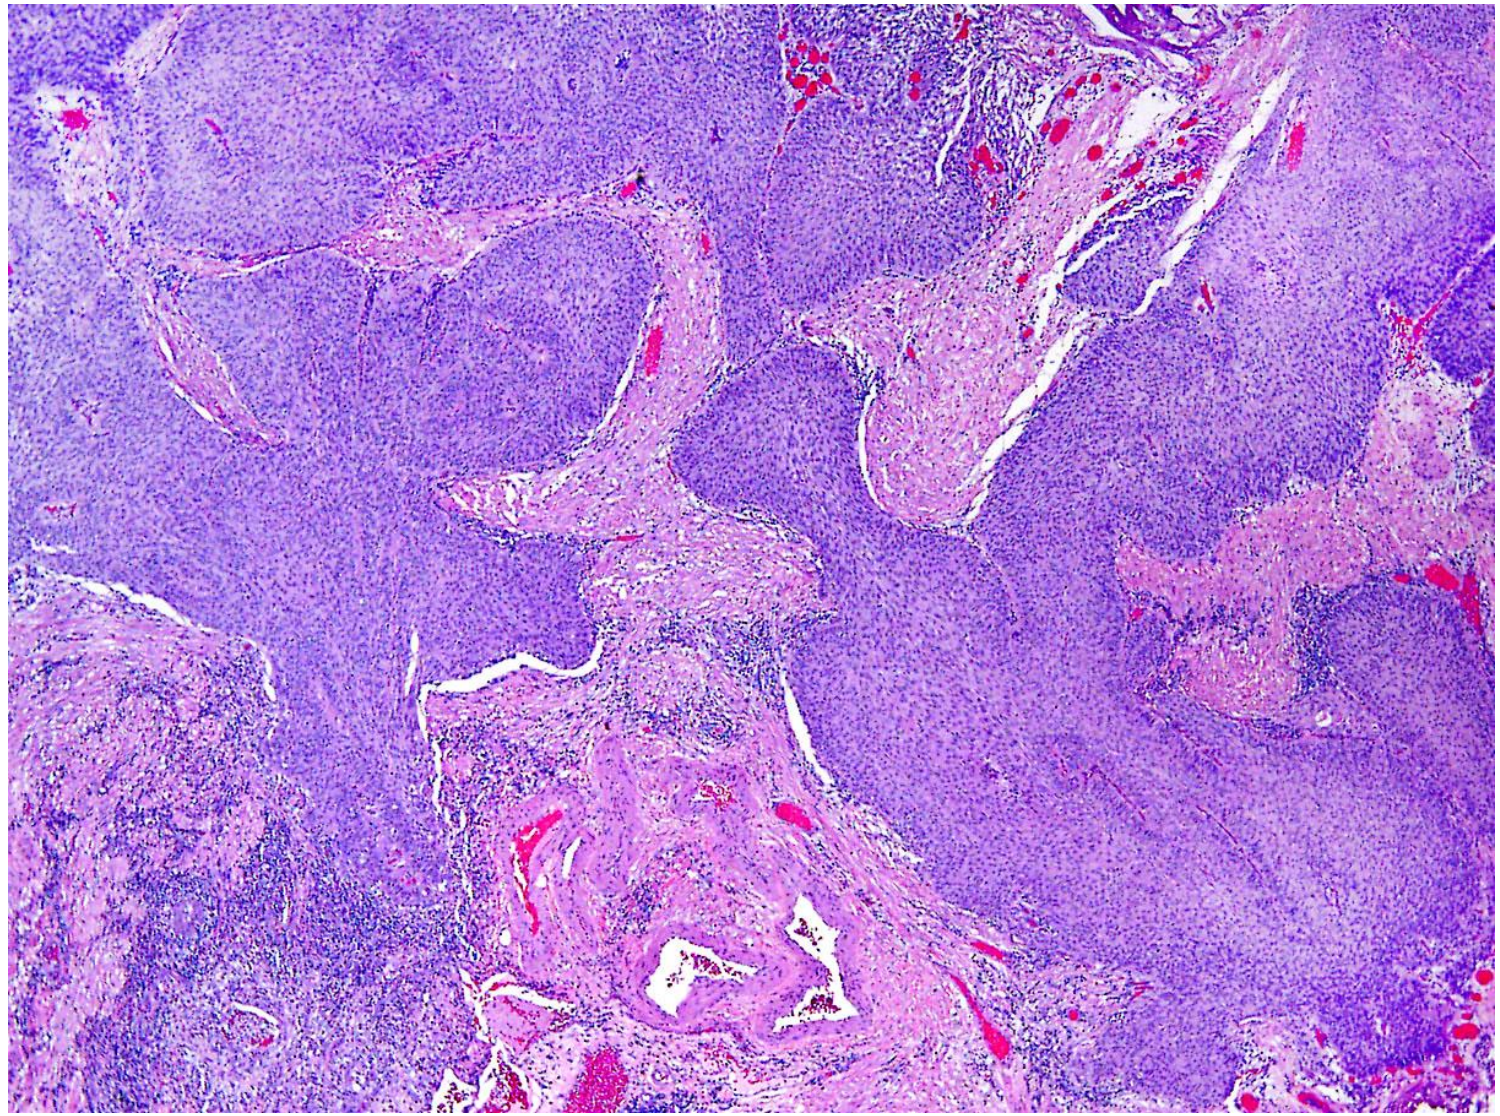
Eva Compérat,[1] Jesse K McKenney,[2] Arndt Hartmann,[3] Ondrej Hes,[4] Simone Bertz,[3] Justine Varinot[1] & Fadi Brimo[5]

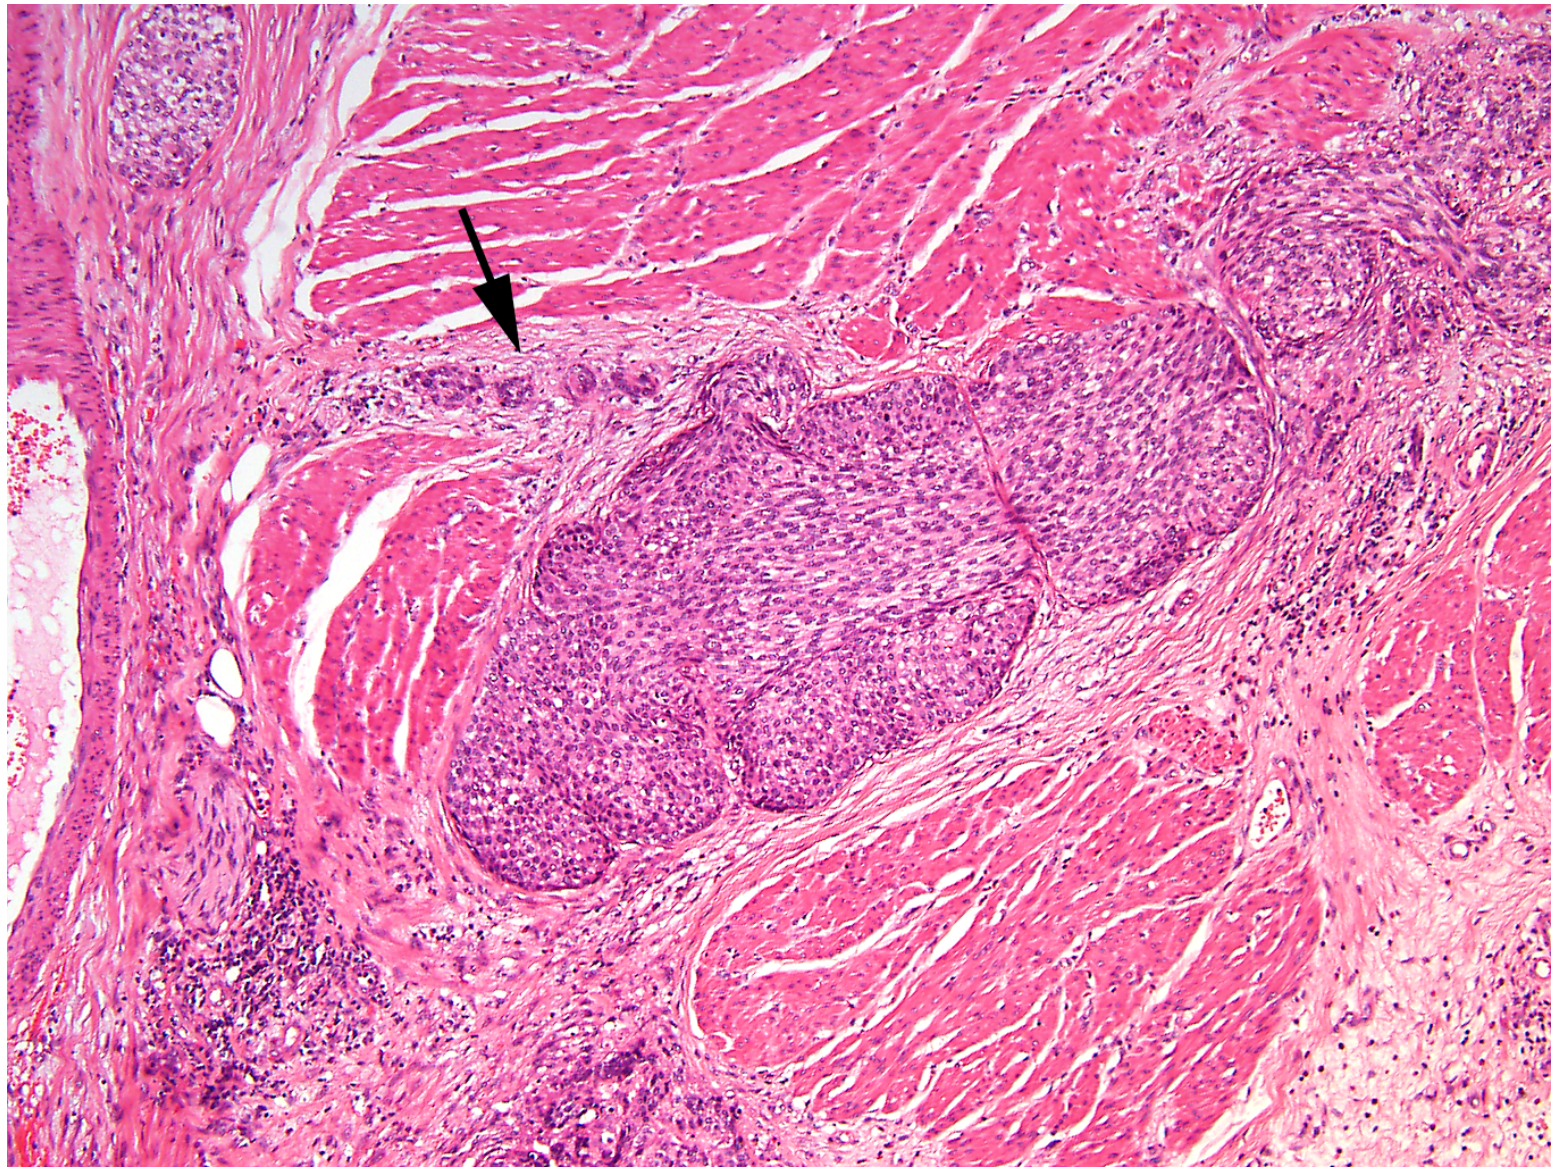
- **Bland** cytological appearance
- **Deceptive pattern of invasion (DDX Inverted)**

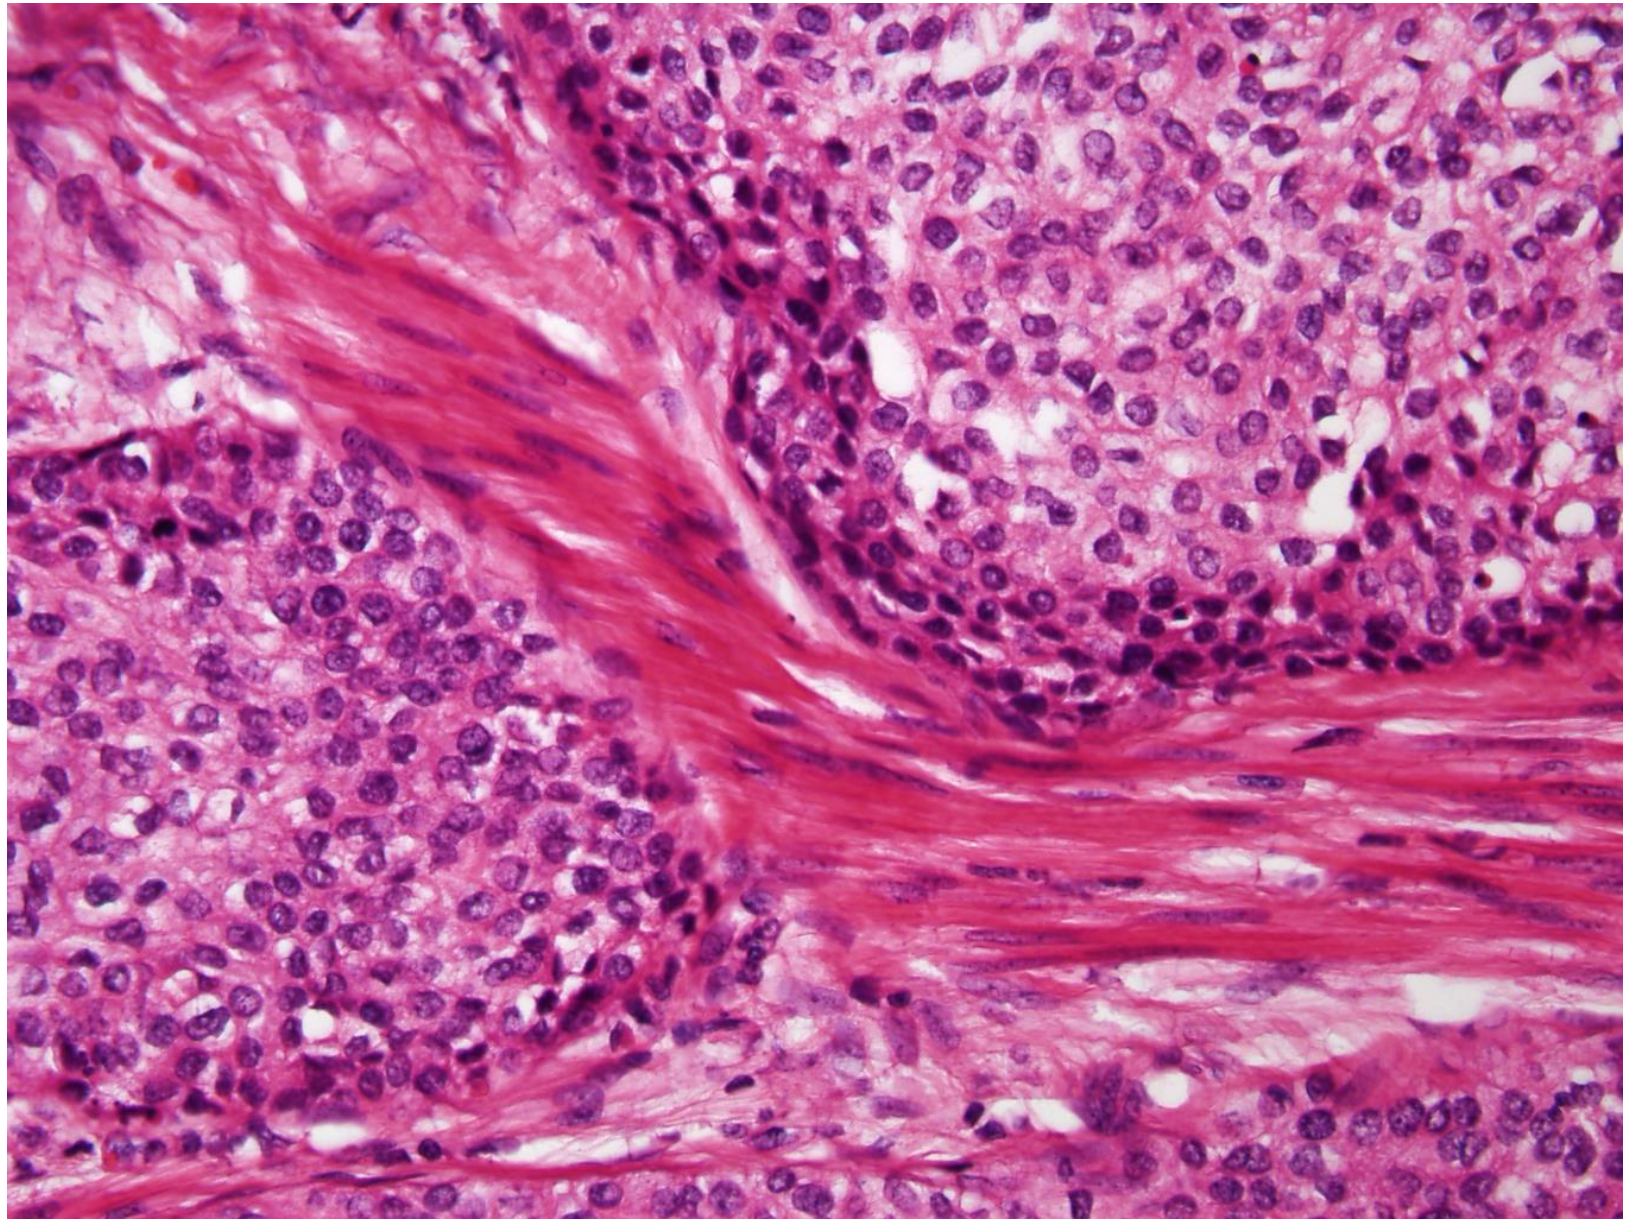
- **58%** extravesical disease (≥pT3 and/or ≥pN1); Mixed more advanced compared to pure large nested?

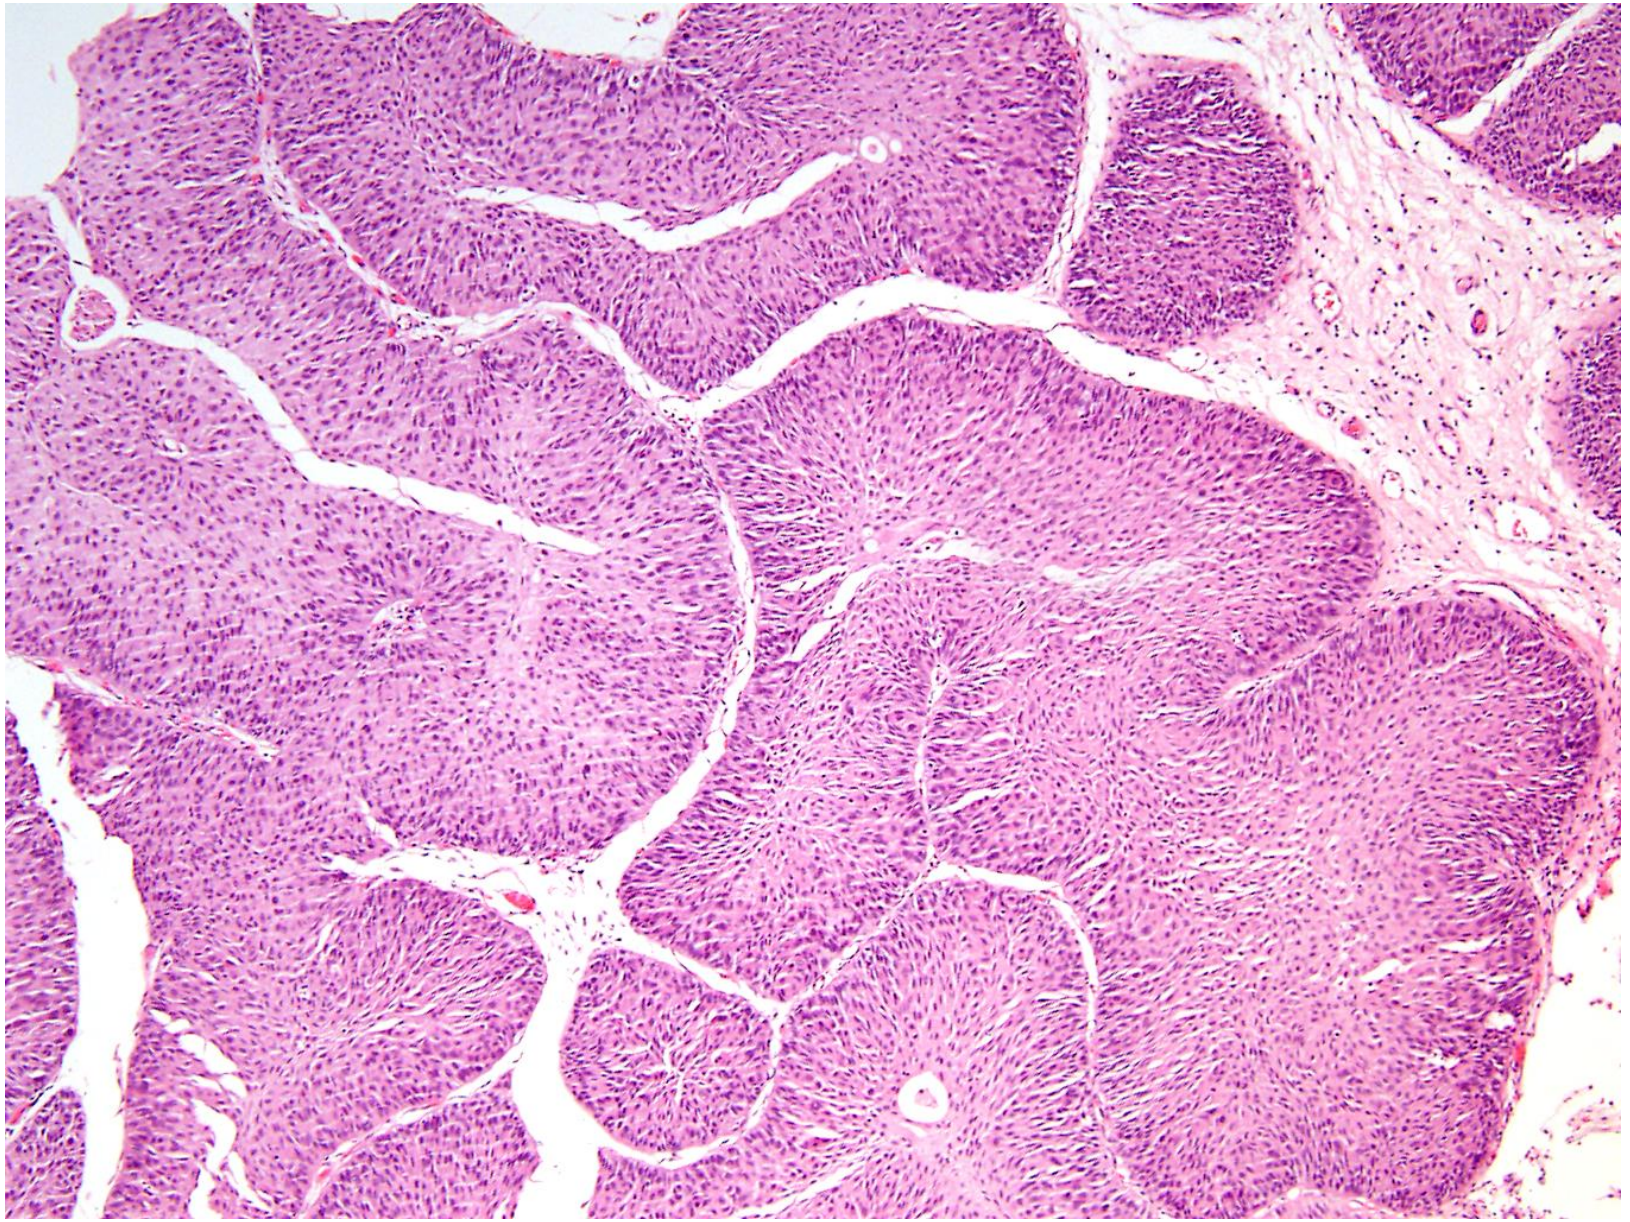
- **21%** recurrence/metastasis
- **24%** died of disease (mean 21.7 months)

- IHC same as conventional & nested UrCa









Non-invasive LG papillary urothelial carcinoma with **inverted pattern**

WHO Classification of the Urinary and Male Genital Tumours

5th edition series

- WHO *5th edition series* **structural reorganization**
- Refinements of **terminology** and **classification**
- Precursor lesions **(Dysplasia, UPUMP)**
- **Grading / Staging/ Urine Cytology**
- Advances in **molecular pathways** (targets of therapy)

WHO Classification of the Urinary and Male Genital Tumours
4th edition series

Urothelial tumours	
Infiltrating urothelial carcinoma	8120/3
Nested, including large nested	
Microcystic	
Micropapillary	8131/3
Lymphoepithelioma-like	8082/3
Plasmacytoid / signet ring cell / diffuse	
Sarcomatoid	8122/3
Giant cell	8031/3
Poorly differentiated	8020/3
Lipid-rich	
Clear cell	
Non-invasive urothelial neoplasms	
Urothelial carcinoma in situ	8120/2
Non-invasive papillary urothelial carcinoma, low-grade	8130/2
Non-invasive papillary urothelial carcinoma, high-grade	8130/2
Papillary urothelial neoplasm of low malignant potential	8130/1
Urothelial papilloma	8120/0
Inverted urothelial papilloma	8121/0
Urothelial proliferation of uncertain malignant potential	
Urothelial dysplasia	

WHO Classification of the Urinary and Male Genital Tumours
5th edition series

Urothelial Tumours
Non-Invasive Urothelial Neoplasia
Urothelial papilloma
Inverted urothelial papilloma
Papillary urothelial neoplasm of low malignant potential
Non-invasive papillary urothelial carcinoma, low-grade
Non-invasive papillary urothelial carcinoma, high-grade
Urothelial carcinoma in situ
Invasive Urothelial Neoplasia
Invasive urothelial carcinoma

“Flat” Precursor Lesions

Urothelial Dysplasia

Should “Urothelial Dysplasia” remain an entity ?

- Term is greatly debated
- **Definition** of dysplasia in urinary tract is **not a synonym of intraepithelial neoplasia** in other organs (**SIL**/**PeIN** etc)

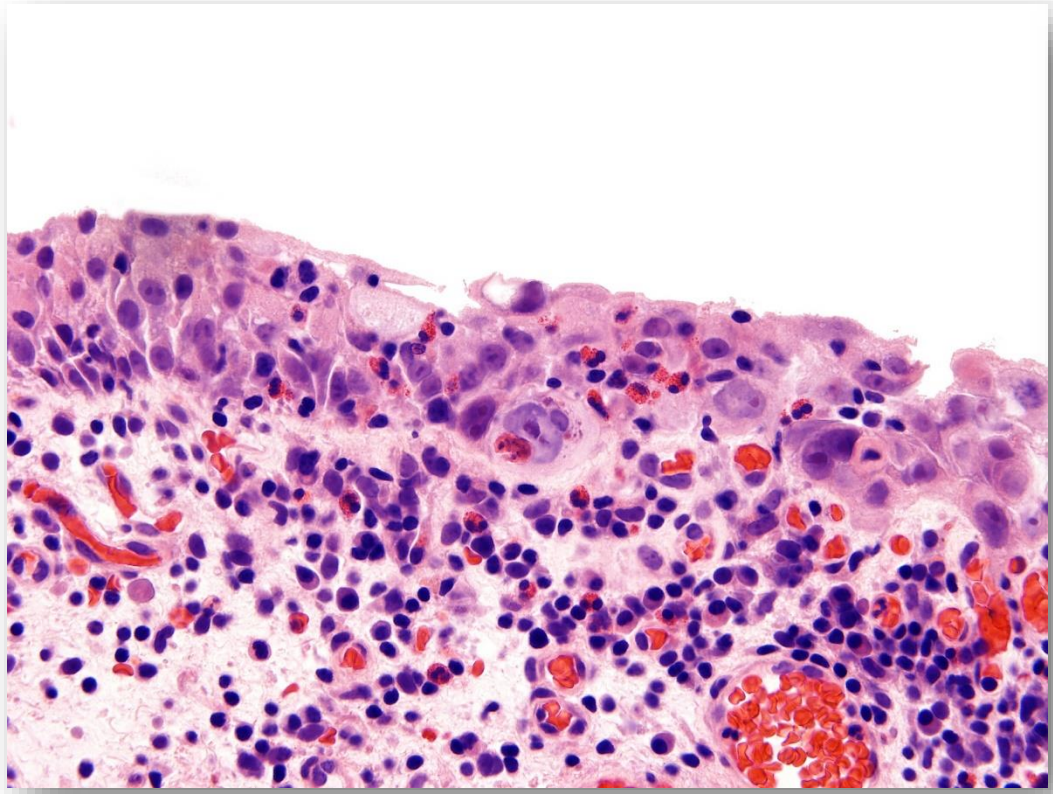
  “*Lesion that encompasses changes that are thought to be pre-neoplastic in nature, but cytologically fall short of the diagnosis of carcinoma in situ*”

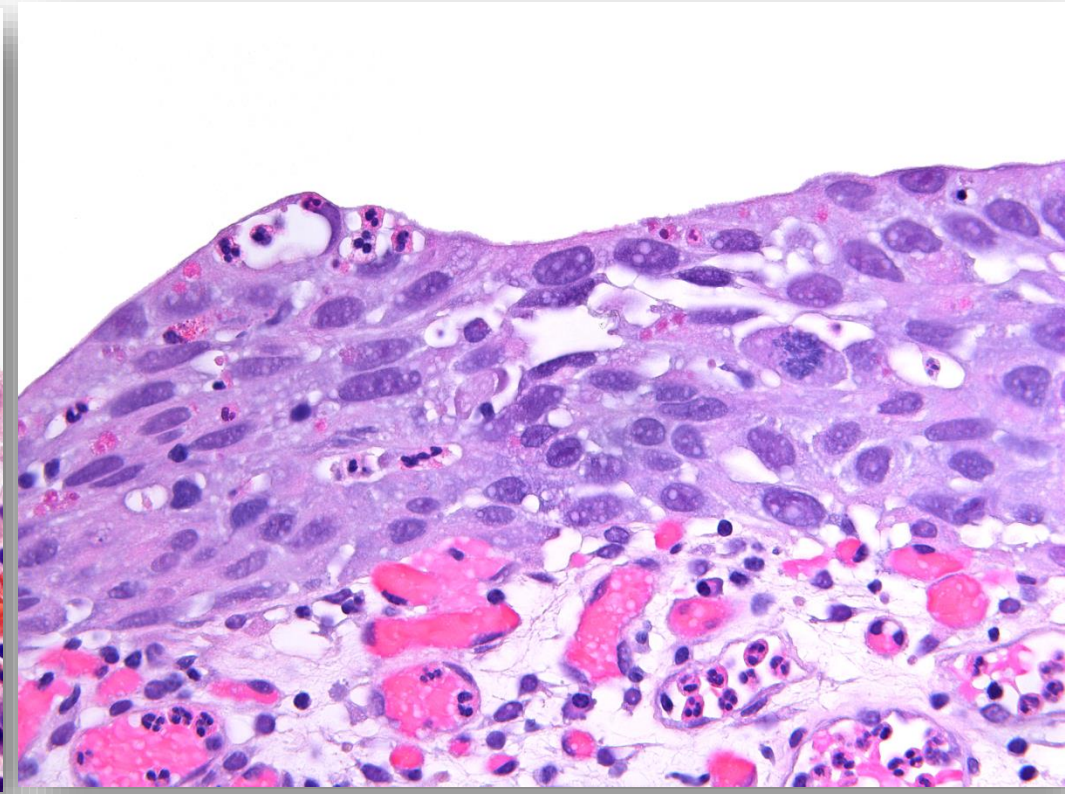
Urothelial CIS

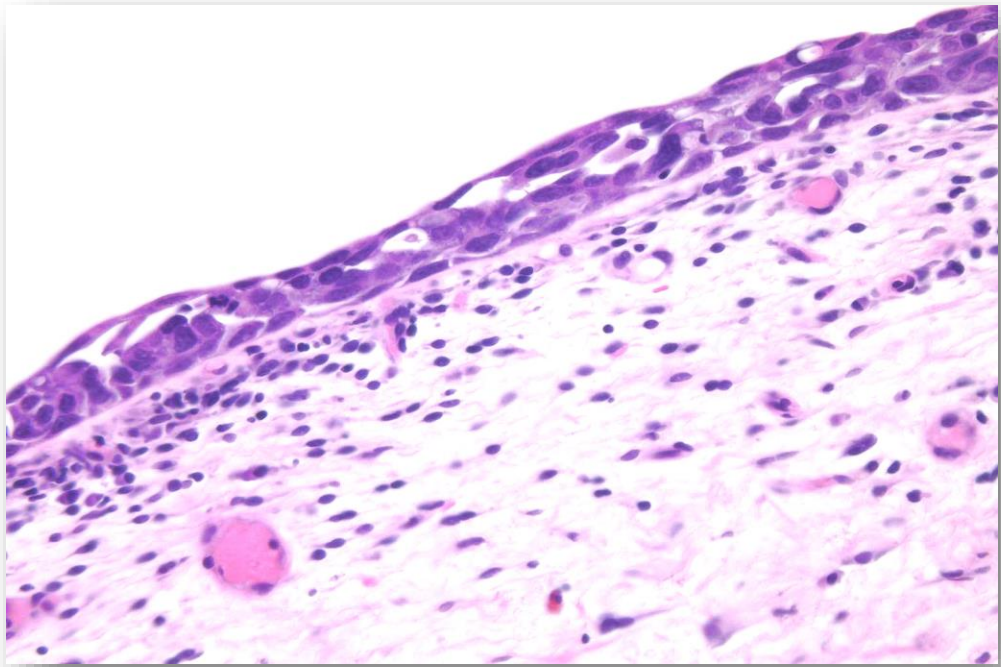
- Presence of cytologically malignant cells **regardless of quantity**
  - No need to be full **thickness**
  - **Pagetoid** cells
  - **Spectrum** of atypia and cell size
  - **Umbrella** cell layer may still be present

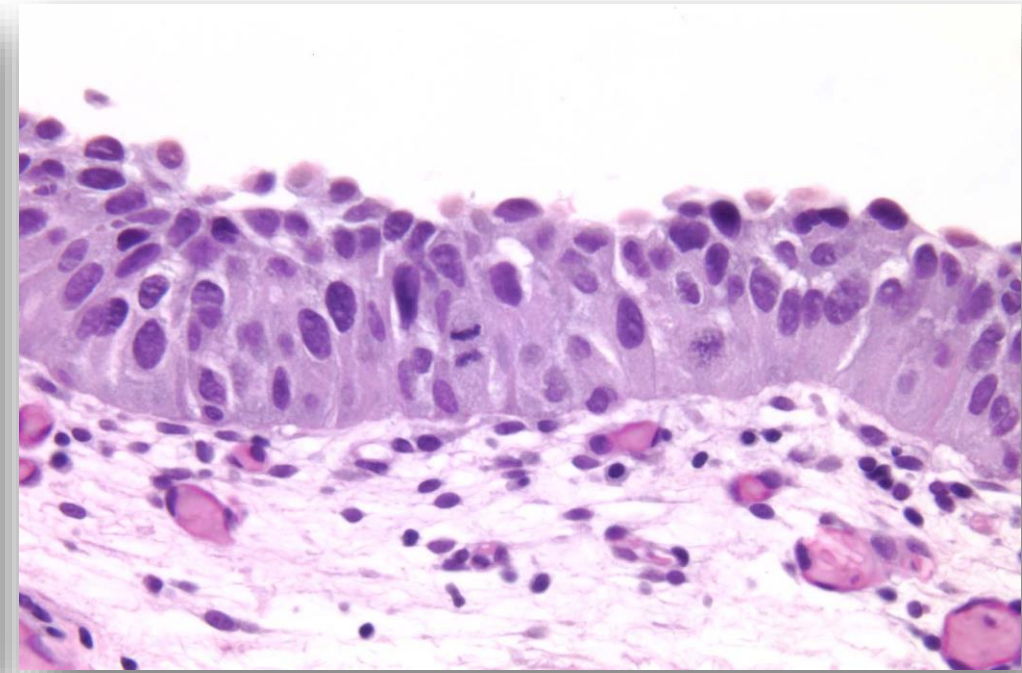
- CIS cells **5x size** of stromal lymphocytes, compared to normal cells which are 2x size of lymphocytes
- Enlarged & hyperchromatic **ON 10X OBJECTIVE**

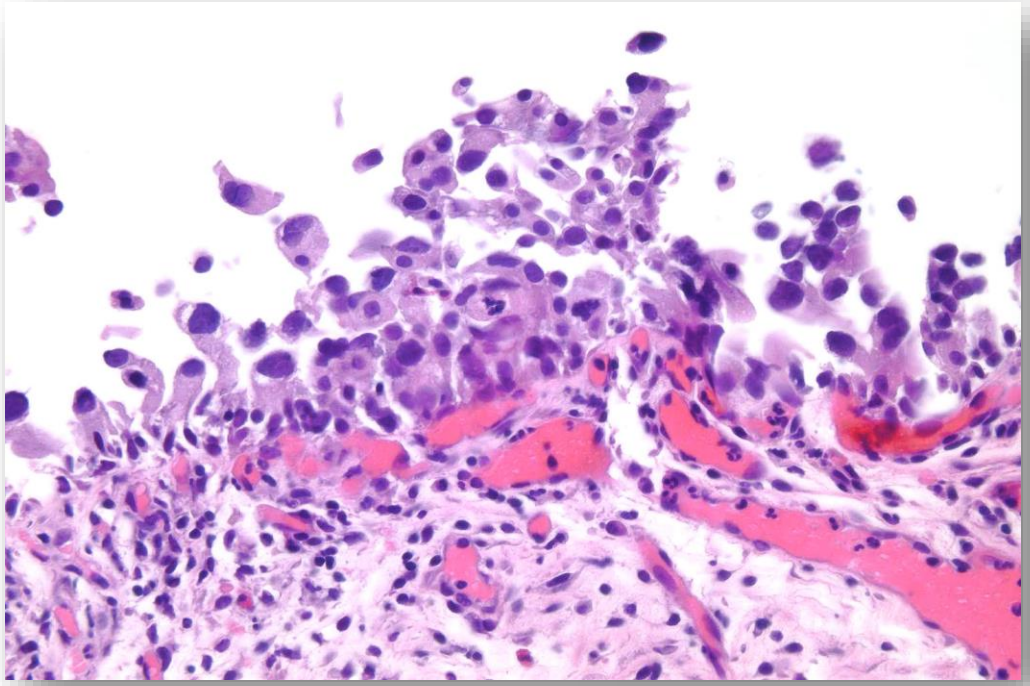
- Dyscohesive : **“denuding cystitis”**

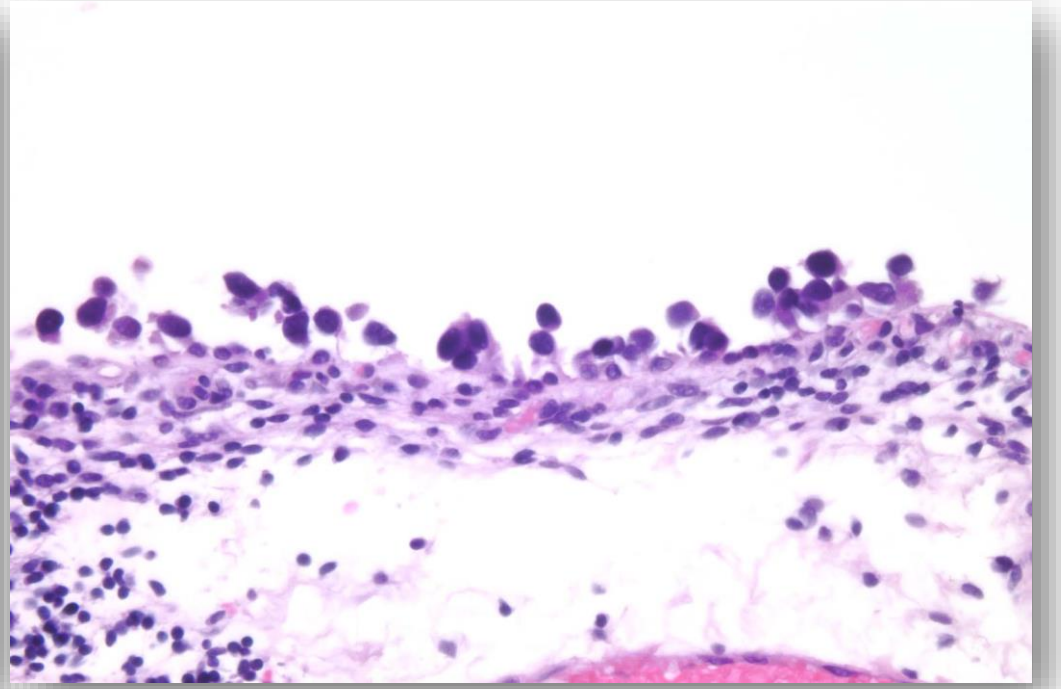


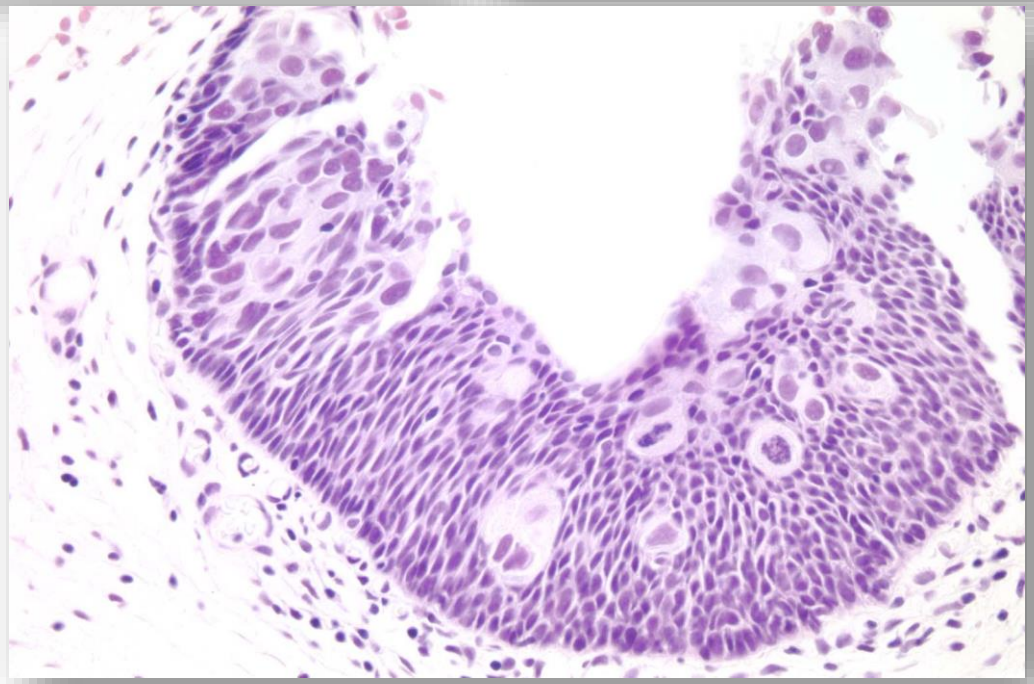










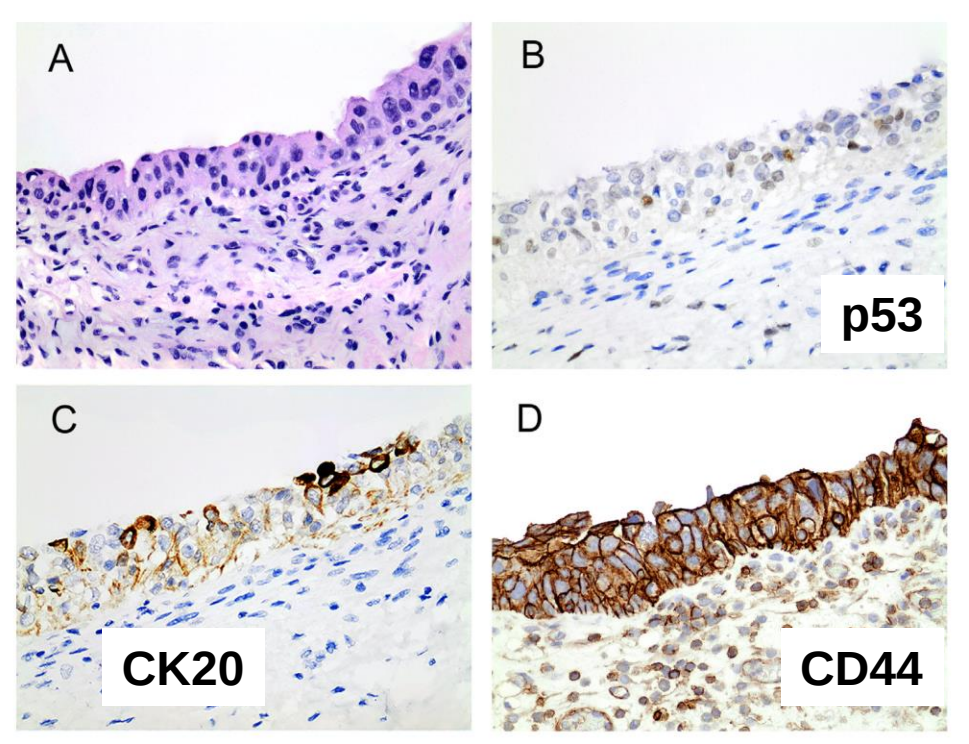


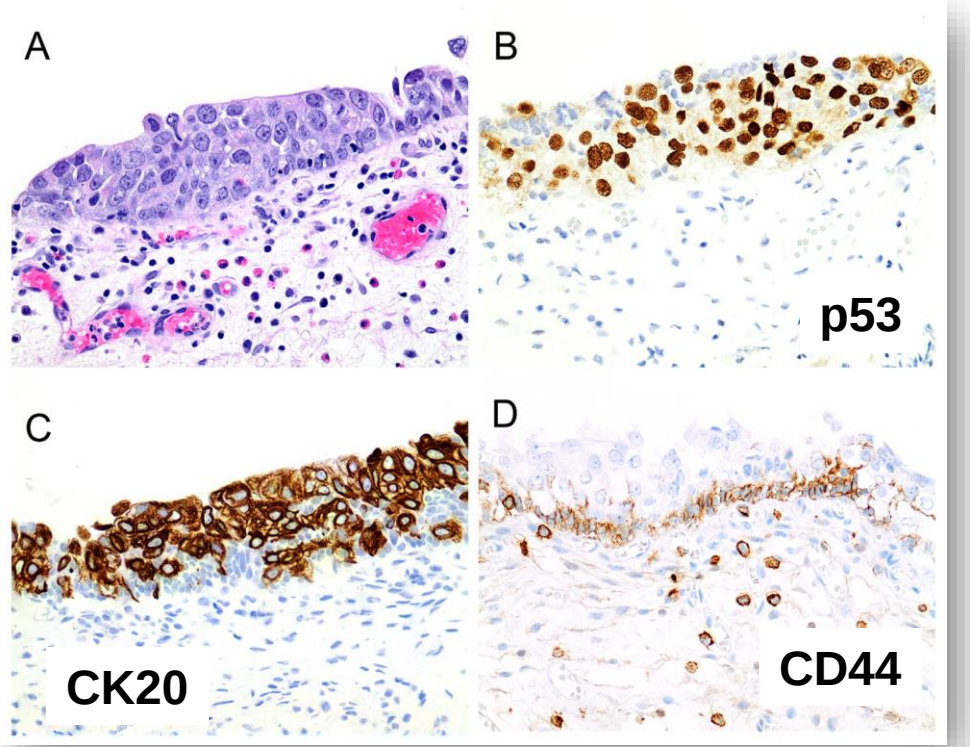
Immunohistochemistry in the workup of bladder biopsies: Frequency, variation and utility of use at an academic center

Patrick McIntire*, Reema Khan, Irem Kilic, Eva M. Wojcik, Stefan E. Pambuccian, Güliz A. Barkan

Loyola University Medical Center, Department of Pathology and Laboratory Medicine, Maywood, IL, United States

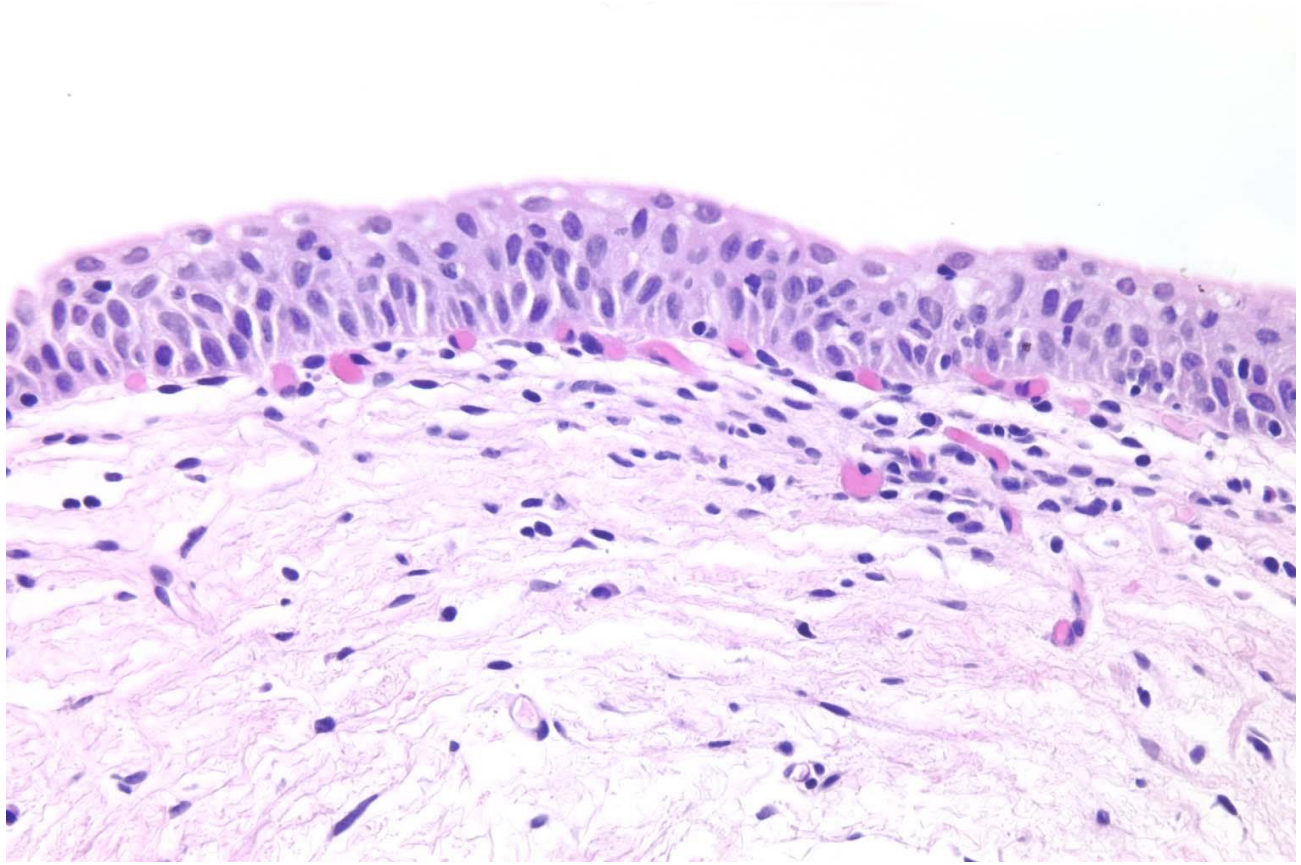
Annals of Diagnostic Pathology 41 (2019) 124–128

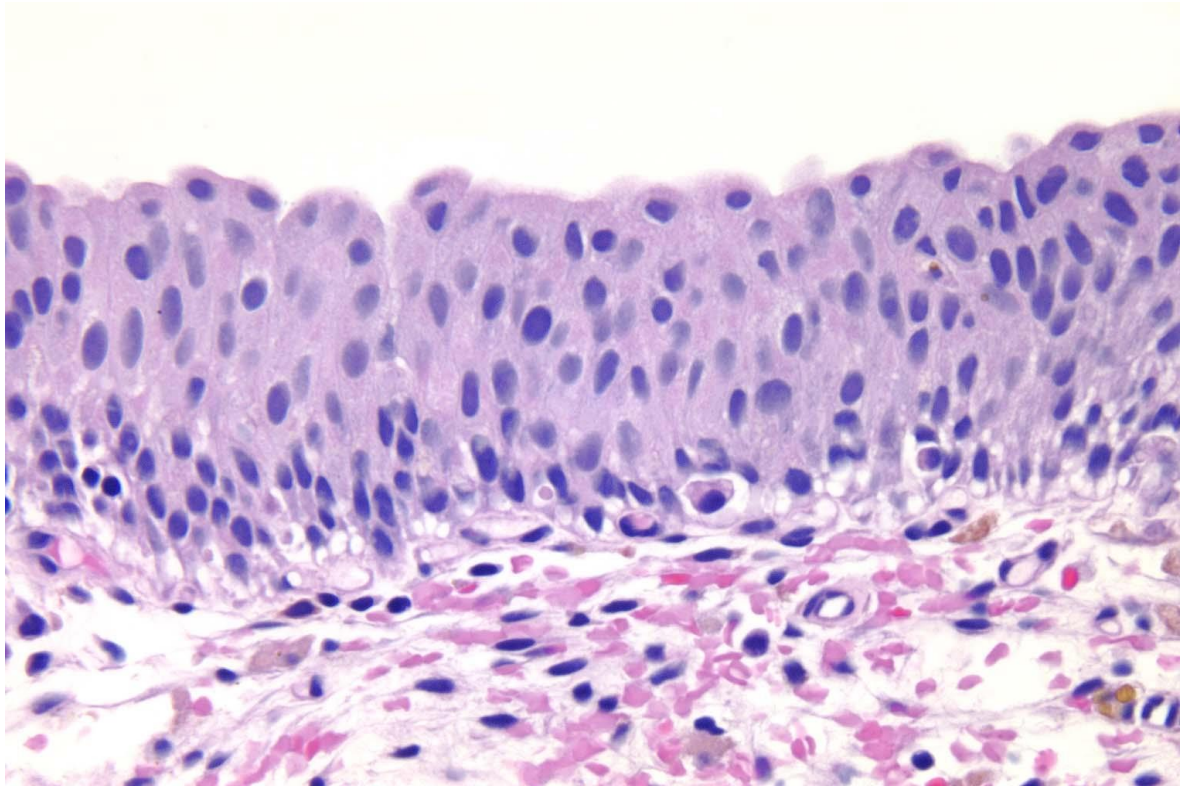




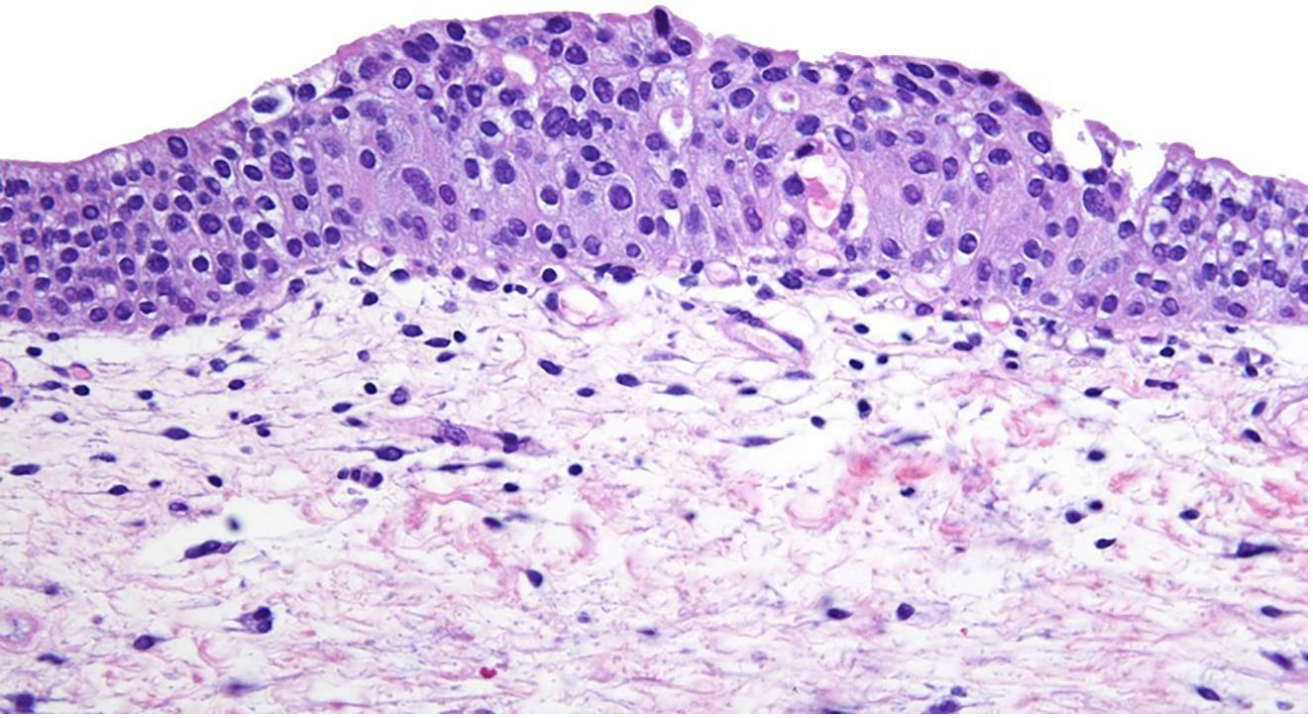
"our institution was an early adopter of IHC but it quickly fell out of favor to a total of only 5 cases in 2017"

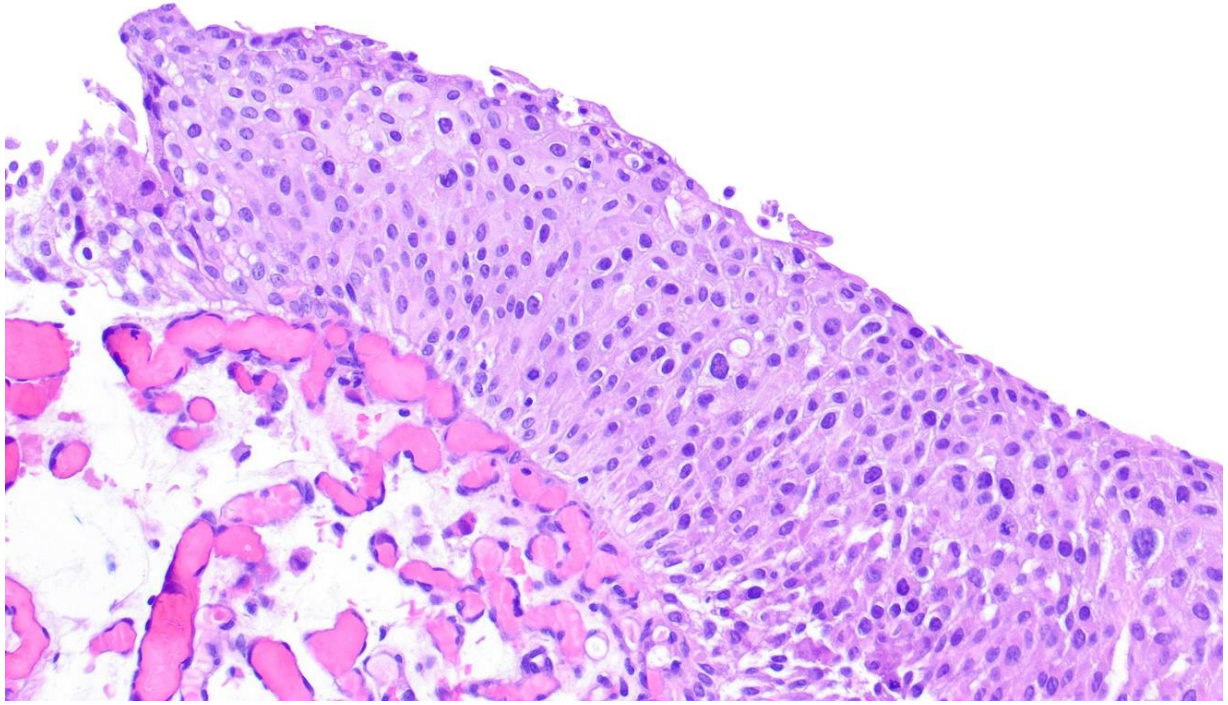
Urothelial Dysplasia





Urothelial Dysplasia





Urothelial Dysplasia

“Flat” Precursor Lesions
Urothelial Dysplasia

Should “Urothelial Dysplasia” remains an entity ?

- Term is greatly debated
- Definition of dysplasia in urinary tract is not a synonym of intraepithelial neoplasia in other organs (SIL/PeIN etc)

“Lesion that encompasses changes that are thought to be pre-neoplastic in nature, but cytologically fall short of the diagnosis of carcinoma in situ”

- Lack of agreement on concrete morphologic criteria ➡ **poor diagnostic reproducibility**
- **IHC is of no help** differentiating from CIS

- **Biologic significance**, difficult to assess:
  - Reproducibility in diagnosis
  - Compounding aspects of multifocality
  - Need for long FU

WHO 5th edition Consensus: While term is preserved, entity **does not merit** an independent section. **Mentioned under urothelial CIS** for potential use when lesions fall short of CIS

Urothelial Dysplasia

My current approach

Diagnosis: Marked urothelial atypia, see comment.
Comment: can not R/O CIS

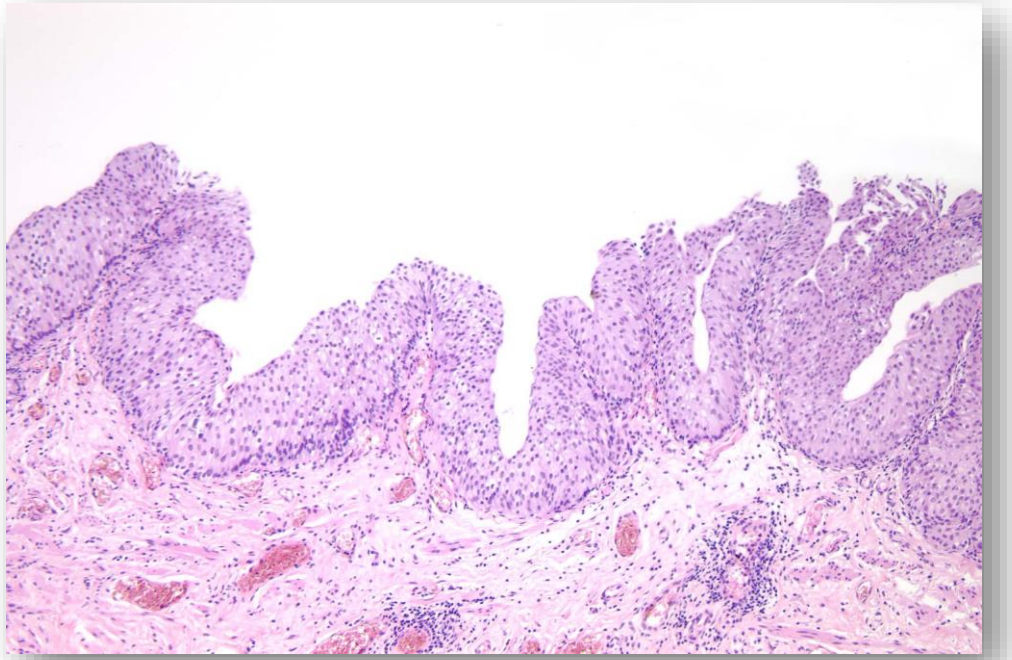
“Flat” Precursor Lesions
UPUMP

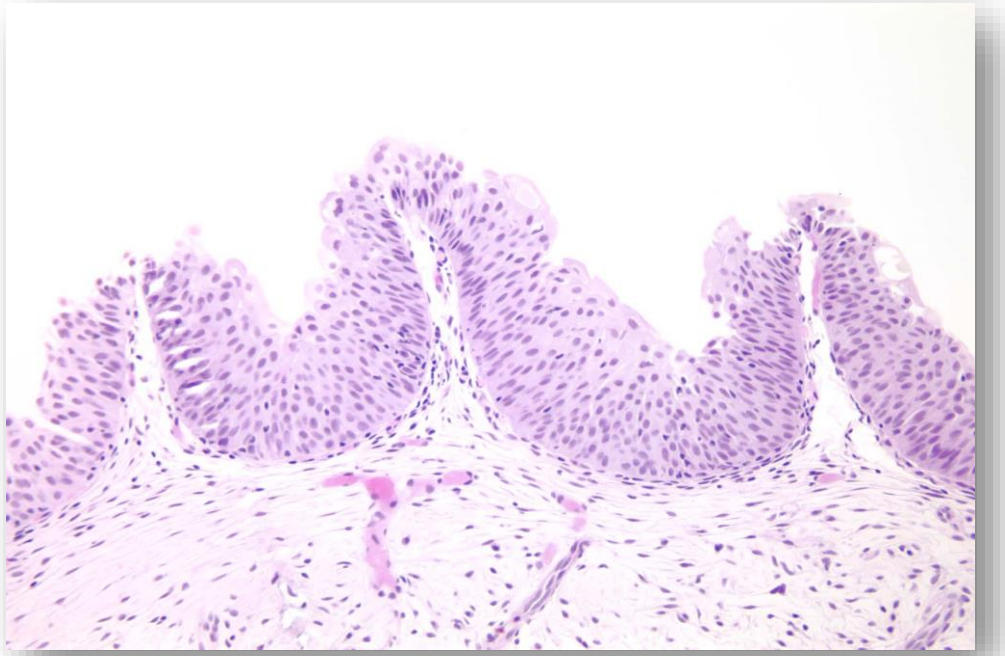
Should “Urothelial Proliferation of Undetermined Malignant Potential” remain an entity ?

UPUMP

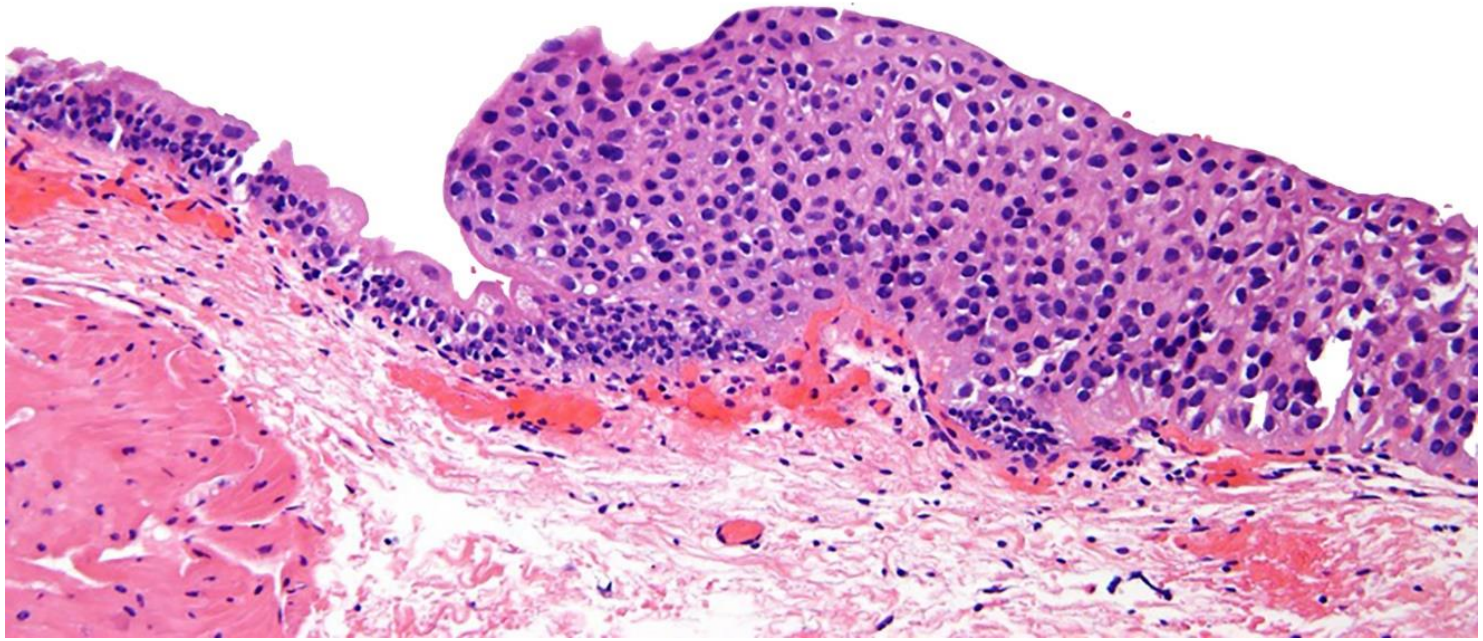
- Term **introduced in WHO 4th** edition
- **Encompass** lesions previously designated as
  “papillary urothelial hyperplasia”
  “Flat hyperplasia with atypia?”
- **Tented** architectural appearance with **short non branching papillae** covered by **mildly atypical** urothelium
- Thought to be **precursors of non-invasive low grade** papillary carcinoma

WHO 5th edition Consensus: UPUMP is **no longer recognized as an entity**
(considered early non-invasive low grade papillary carcinoma or shoulder extension of such tumors)





UMPUM



UMPUM

WHO Classification of the Urinary and Male Genital Tumours

5th edition series

- WHO *5th edition series* **structural reorganization**
- Refinements of **terminology** and **classification**
- Precursor lesions **(HGPIN; IDC-P; IAP)**
- **Grading / Staging / Urine Cytology**
- Advances in **molecular pathways** (targets of therapy)

Grading

WHO Classification of the Urinary and Male Genital Tumours
5th edition series

- First proposed in 1998
- Promulgated by the **WHO in the third (2004) and fourth (2016)**
- Based on **architectural and cytological** disorder
- Closely reflects the **two major molecular pathogenesis** pathways
- Clinically relevant

Urothelial Tumours
Non-Invasive Urothelial Neoplasia
Urothelial papilloma
Inverted urothelial papilloma
Papillary urothelial neoplasm of low malignant potential
Non-invasive papillary urothelial carcinoma, low-grade
Non-invasive papillary urothelial carcinoma, high-grade
Urothelial carcinoma in situ
Invasive Urothelial Neoplasia
Invasive urothelial carcinoma

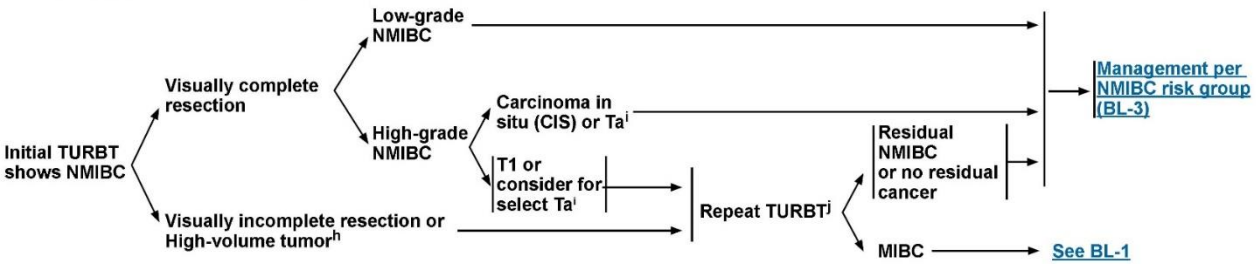
Discussion

RISK STRATIFICATION OF NMIBC



AUA Risk Stratification for Non-Muscle Invasive Bladder Cancer*

Low Risk	Intermediate Risk	High Risk
• Papillary urothelial neoplasm of low malignant potential • Low grade urothelial carcinoma ▸ Ta and ▸ ≤3 cm and ▸ Solitary	• Low grade urothelial carcinoma ▸ T1 or ▸ >3 cm or ▸ Multifocal or ▸ Recurrence within 1 year • High grade urothelial carcinoma ▸ Ta and ▸ ≤3 cm and ▸ Solitary	• High grade urothelial carcinoma ▸ CIS or ▸ T1 or ▸ >3 cm or ▸ Multifocal • Very high risk features (any): ▸ BCG unresponsive[k] ▸ Variant histologies[l] ▸ Lymphovascular invasion ▸ Prostatic urethral invasion

Reproduced with permission from Chang SS, Boorjian SA, Chou R, et al. Diagnosis and treatment of non-muscle invasive bladder cancer: AUA/SUO guideline. J Urol 2016;196:1021.
*Within each of these risk strata an individual patient may have more or less concerning features that can influence care.

Grading

WHO Classification of the Urinary and Male Genital Tumours
5th edition series

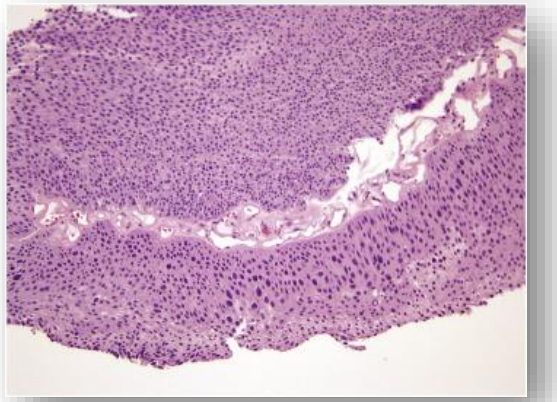
- First proposed in 1998
- Promulgated by the WHO in the third (2004) and fourth (2016)
- Based on architectural and cytological disorder
- Closely reflects the **two major molecular pathogenesis** pathways
- Clinically relevant

Urothelial Tumours
Non-Invasive Urothelial Neoplasia
Urothelial papilloma
Inverted urothelial papilloma
Papillary urothelial neoplasm of low malignant potential
Non-invasive papillary urothelial carcinoma, low-grade
Non-invasive papillary urothelial carcinoma, high-grade
Urothelial carcinoma in situ
Invasive Urothelial Neoplasia
Invasive urothelial carcinoma

Three tiered classification (two tier grading) is **maintained**

Grading Heterogeneity

WHO Classification of the Urinary and Male Genital Tumours
5th edition series



- **Heterogeneity in grade** occurs in up to **one third** of non-Invasive papillary urothelial Carcinoma
- Influence outcome?

WHO 5th edition proposition

- Report as **high grade** if high grade component represents **≥ 5%**
- Tumors with **<5% high grade** component should be reported as **low grade with less than 5% high grade**

- **Pragmatic approach**
  - Promote **consistency** in grading heterogeneous tumors
  - Allow for **further data** in large appropriately powered and prospectively designed studies

Grading of Invasive Urothelial Carcinoma

WHO Classification of the Urinary and Male Genital Tumours
5th edition series

- **Overwhelming majority** of invasive urothelial carcinoma are high grade
- **Rare low-grade** invasive urothelial carcinoma **lacking significant nuclear atypia** are recognized
  - No standardized criteria
  - Favorable outcome?

WHO 5th edition
*"Required to **grade every invasive** urothelial carcinoma"*
*"Histologic **subtypes** of urothelial carcinoma and those with **divergent** differentiation are **all considered high grade"***

Staging

WHO Classification of the Urinary and Male Genital Tumours
5th edition series

pT1 subcategorization

- **Extent of lamina propria invasion** carries PGx value
  - **Micrometric** measurements (microscopic vs extensive invasion)
  - **Histo-anatomic** landmarks (*MM* and vascular plexus)
  - Micrometric ? more feasible and better predictor

- Higher subcategories correlate with **recurrence and stage progression**

System	Technique	Measure of Invasion	Landmark or Cutoff	Approximate Microscope Objective Cutoff
T1a/T1b	Histoanatomic	Depth (level)	MM/VP	—
T1a/T1b/ T1c	Histoanatomic	Depth (level)	MM/VP	—
T1m/T1e	Micrometric	Depth* or diameter†	0.5 mm	×40
ROL1/ ROL2	Micrometric	Diameter†	1 mm	×20
ALLICA	Micrometric	Diameter†	2.3 mm‡	×10

WHO 5th Edition
Well designed prospective head-to-head comparisons **NEEDED**
"Pathologists are strongly encouraged to convey the extent of lamina propria invasion using any of the proposed approaches"

Urine Cytology

WHO Classification of the Urinary and Male Genital Tumours
5th edition series

The Paris System for Reporting Cytology (TPS)

- **Accuracy** significantly improved
- **Acknowledges inability** to reliably detect low grade urothelial neoplasms
- Low grade urothelial neoplasm (**LGUN**) encompasses papilloma, PUNLMP and LGUC
- Prioritize identification of High Grade Urothelial Ca (**HGUC**)

WHO 5th edition
Recommends adoption of **The Paris System for Reporting Cytology (TPS)**

Rosenthal DL, Wojcik EM, Kurtycz DFI, editors. The Paris System for reporting urinary cytology.
Cham (Switzerland): Springer International Publishing; 2016

The Paris System TPS

Diagnostic category	Diagnostic criteria	ROHM
Negative for High Grade Urothelial Ca **(NHGUC)**	Benign urothelial, glandular, squamous cells, changes due to instrumentation, lithiasis, polyoma, therapy	8% - 24%
Atypical Urothelial Cells **(AUC)**	**Required** N/C ratio ≥ 0.5 and one of: Hyperchromasia Irregular clumpy chromatin Irregular nuclear contours	24% - 53%
Suspicious for High Grade Urothelial Ca **(SHGUC)**	**Required** N/C ratio > 0.7 and hyperchromasia, and one of: Irregular clumpy chromatin Irregular nuclear contours	59% - 94%
Positive for High Grade Urothelial Ca **(HGUC)**	**Required** cellularity (> 5-10 cells) and N/C ratio > 0.7 - Hyperchromasia - Irregular clumpy chromatin - Irregular nuclear contours	76% - 100%
Low Grade Urothelial Neoplasm **(LGUN)**	**Required** fibrovascular cores and absence of nuclear atypia	0% - 44%

WHO Classification of the Urinary and Male Genital Tumours

5th edition series

- WHO *5th edition series* **structural reorganization**
- Refinements of **terminology** and **classification**
- Precursor lesions **(HGPIN; IDC-P; IAP)**
- **Grading / computational pathology (AI)**
- Advances in **molecular pathways** (targets of therapy)

Comprehensive Molecular Characterization of Muscle-Invasive Bladder Cancer

Cell 2017

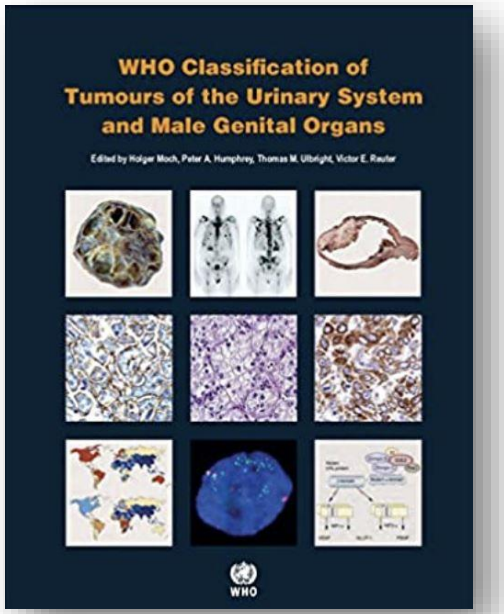
Take home points

- Urothelial Dysplasia is on the way out ☺
- UPUMP no more
- Invasive urothelilal carcinoma subtypes and divergent differentiation should be recognized and stated
- The many flavors of Nested subtype
- Grading: WHO 04 survives
- pT1 substaging should be attempted

Take home points

- Integrated genomic and transcriptomic analysis has improved the identification of clinically relevant **intrinsic molecular subtypes** of MIBC and UrCa Subtypes
- Molecular subtyping can help predict response to **NAC**
- **ICI** lead to durable response in subsets of MIBC that could be refined by molecular subtyping (prospective trials)

THANK YOU !



WHO classification of tumours of the urothelial tract

Urothelial tumours	
Infiltrating urothelial carcinoma	8120/3
Nested, including large nested	
Microcystic	
Micropapillary	8131/3
Lymphoepithelioma-like	8082/3
Plasmacytoid / signet ring cell / diffuse	
Sarcomatoid	8122/3
Giant cell	8031/3
Poorly differentiated	8020/3
Lipid-rich	
Clear cell	
Non-invasive urothelial neoplasms	
Urothelial carcinoma in situ	8120/2
Non-invasive papillary urothelial carcinoma, low-grade	8130/2
Non-invasive papillary urothelial carcinoma, high-grade	8130/2
Papillary urothelial neoplasm of low malignant potential	8130/1
Urothelial papilloma	8120/0
Inverted urothelial papilloma	8121/0
Urothelial proliferation of uncertain malignant potential	
Urothelial dysplasia	
Squamous cell neoplasms	
Pure squamous cell carcinoma	8070/3
Verrucous carcinoma	8051/3
Squamous cell papilloma	8052/0
Glandular neoplasms	
Adenocarcinoma, NOS	8140/3
Enteric	8144/3
Mucinous	8480/3
Mixed	8140/3
Villous adenoma	8261/0
Urachal carcinoma	8010/3
Tumours of Müllerian type	
Clear cell carcinoma	8310/3
Endometrioid carcinoma	8380/3
Neuroendocrine tumours	
Small cell neuroendocrine carcinoma	8041/3
Large cell neuroendocrine carcinoma	8013/3
Well-differentiated neuroendocrine tumour	8240/3
Paraganglioma	8693/1
Melanocytic tumours	
Malignant melanoma	8720/3
Naevus	8720/0
Melanosis	
Mesenchymal tumours	
Rhabdomyosarcoma	8900/3
Leiomyosarcoma	8890/3
Angiosarcoma	9120/3
Inflammatory myofibroblastic tumour	8825/1
Perivascular epithelioid cell tumour	
Benign	8714/0
Malignant	8714/3
Solitary fibrous tumour	8815/1
Leiomyoma	8890/0
Haemangioma	9120/0
Granular cell tumour	9580/0
Neurofibroma	9540/0
Urothelial tract haematopoietic and lymphoid tumours	
Miscellaneous tumours	
Carcinoma of Skene, Cowper, and Littre glands	8140/3
Metastatic tumours and tumours extending from other organs	
Epithelial tumours of the upper urinary tract	
Tumours arising in a bladder diverticulum	
Urothelial tumours of the urethra	

The morphology codes are from the International Classification of Diseases for Oncology (ICD-O) [917A]. Behaviour is coded /0 for benign tumours; /1 for unspecified, borderline, or uncertain behaviour; /2 for carcinoma in situ and grade III intraepithelial neoplasia; and /3 for malignant tumours. The classification is modified from the previous WHO classification [756A], taking into account changes in our understanding of these lesions.

WHO Classification of the Urinary and Male Genital Tumours
5th edition series

Urothelial Tumours
Non-Invasive Urothelial Neoplasia
Urothelial papilloma
Inverted urothelial papilloma
Papillary urothelial neoplasm of low malignant potential
Non-invasive papillary urothelial carcinoma, low-grade
Non-invasive papillary urothelial carcinoma, high-grade
Urothelial carcinoma in situ
Invasive Urothelial Neoplasia
Invasive urothelial carcinoma
Squamous cell neoplasms
Urothelial squamous cell papilloma
Verrucous carcinoma of the bladder
Pure urothelial squamous cell carcinoma
Glandular neoplasms
Adenomas
Villous adenoma
Adenocarcinomas
Adenocarcinoma NOS
Urachal and diverticular neoplasms
Urachal carcinoma
Diverticular carcinoma
Urethral neoplasms
Urethral accessory gland carcinomas
Littre gland carcinoma of the urethra
Skene gland carcinoma of the urethra
Cowper gland carcinoma of the urethra
Tumours of Mullerian type
Clear cell adenocarcinoma
Endometrioid carcinoma

Bladder Cancer (MIBC)
TCGA 2014

- Integrated genomic analysis of **131 MIBC**

- Average Genetic Alterations per tumor:
  - 302 mutations
  - 204 segmental CNA
  - 22 rearrangements

- Recurrent mutations in **32 genes**:
  - Cell-cycle regulation
  - Chromatin regulation
  - RTK signaling pathways
  - Nine genes not frequently mutated in cancers (MLL2,ERCC2,ELF3,KLF5,RXRA, CDKN1A)

- **Rx Targets in 69%** of MIBC

HISTOLOGIC FEATURES OF PAPILLARY UROTHELIAL LESIONS

	Papilloma	**Papillary neoplasm of low malignant potential**	**Low-grade papillary carcinoma**	**High-grade papillary carcinoma**
Architecture				
Papillae	Delicate.	Delicate. Occasionally fused.	Fused, branching, and delicate.	Fused, branching and delicate.
Organization of cells	Identical to normal.	Polarity identical to normal. Any thickness. Cohesive.	Predominantly ordered, yet minimal crowding and minimal loss of polarity. Any thickness. Cohesive.	Predominantly disordered with frequent loss of polarity. Any thickness. Often dyscohesive.
Cytology				
Nuclear size	Identical to normal.	May be uniformly enlarged.	Enlarged with variation in size.	Enlarged with variation in size.
Nuclear shape	Identical to normal.	Elongated, round-oval, uniform.	Round-oval. Slight variation in shape and contour.	Moderate-marked pleomorphism.
Nuclear chromatin	Fine.	Fine.	Mild variation within and between cells.	Moderate-marked variation both within and between cells with hyperchromasia.
Nucleoli	Absent.	Absent to inconspicuous.	Usually inconspicuous.	Multiple prominent nucleoli may be present.
Mitoses	Absent	Rare, basal.	Occasional, at any level.	Usually frequent, at any level. May be atypical
Umbrella cells	Uniformly present.	Present.	Usually present.	May be absent.

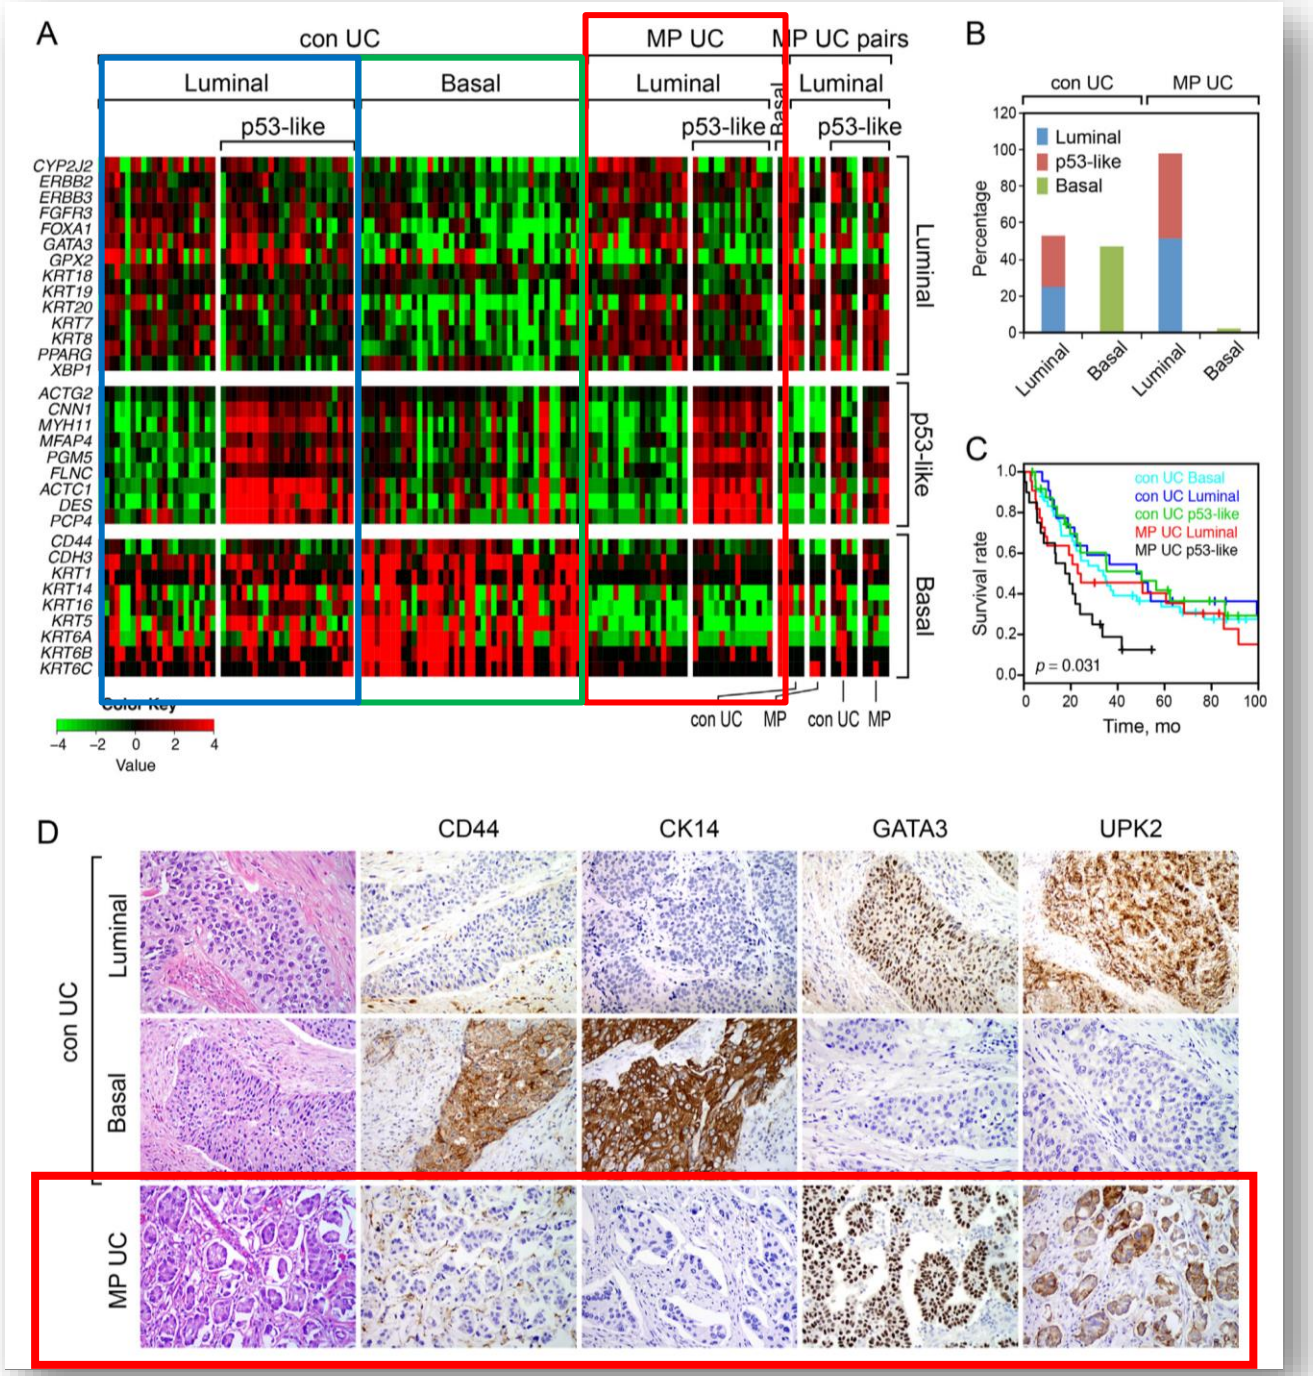
Guo et al 2016 European Urology

- 43 MP-UC; WES
- MP-UC almost exclusively **luminal**
- Enrichment of **PPARG** and suppression of p63 target genes
- Similar to luminal UrCa; a subset exhibits activation of wild-type p53 downstream genes (**p53-Like**)
- **P53-Like most aggressive** molecular subtype of MP-UC

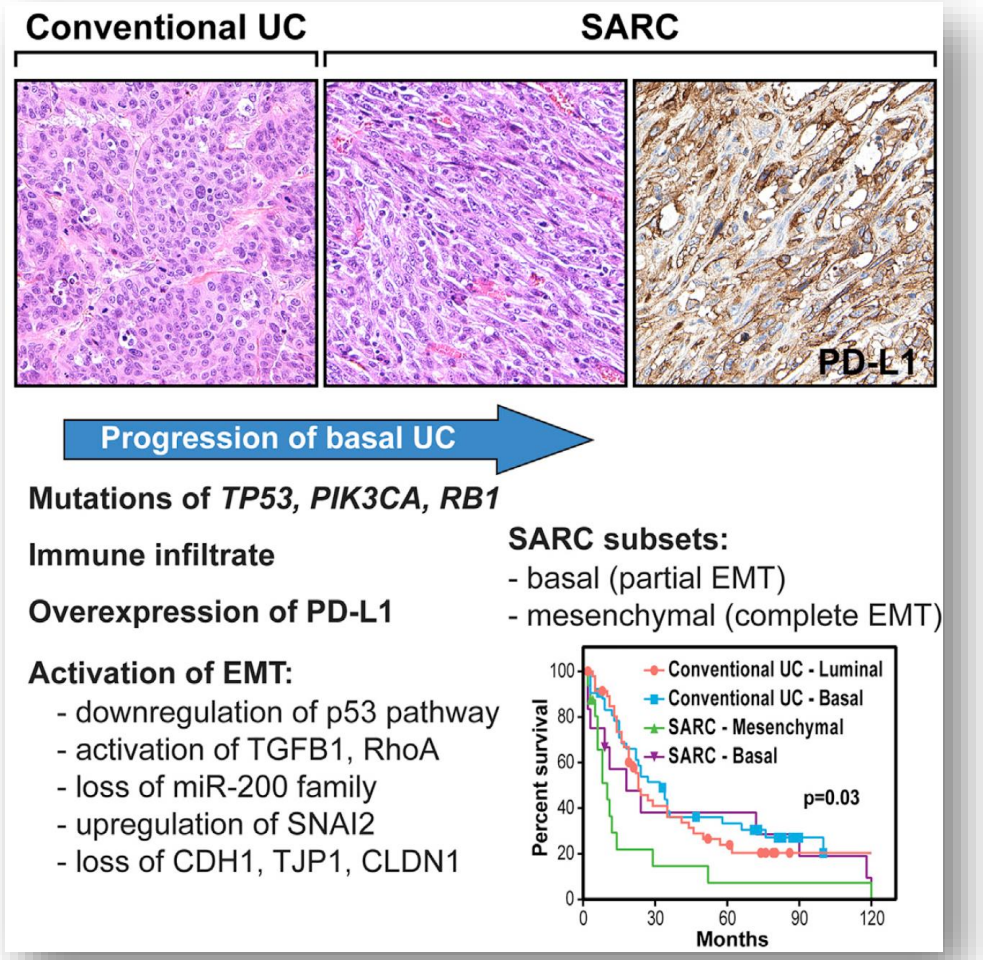


Dysregulation of EMT Drives the Progression to Clinically Aggressive Sarcomatoid Bladder Cancer

Charles C. Guo,[1,8] Tadeusz Majewski,[1,8] Li Zhang,[2,8] Hui Yao,[3] Jolanta Bondaruk,[1] Yan Wang,[1] Shizhen Zhang,[1] Ziqiao Wang,[4] June Goo Lee,[1] Sangkyou Lee,[1] David Cogdell,[1] Miao Zhang,[1] Peng Wei,[4] H. Barton Grossman,[5] Ashish Kamat,[5] Jonathan James Duplisea,[5] James Edward Ferguson III,[5] He Huang,[1] Vipulkumar Dadhania,[1] Jianjun Gao,[6] Colin Dinney,[5] John N. Weinstein,[3] Keith Baggerly,[3] David McConkey,[7] and Bogdan Czerniak[1,9,*]

Guo CC et al., Cell Reports 2019

- 28 Sarcomatoid Ca.
- **Progression from basal UrCa**
- Two subsets: **Basal** and **mesenchymal** (most aggressive) subsets **(p63)**
- **Drivers:** Dysregulation of **cell cycle** and **EMT networks**
- Infiltrated immune phenotype and upregulation of **PD-L1**



Dysregulation of EMT Drives the Progression to Clinically Aggressive Sarcomatoid Bladder Cancer

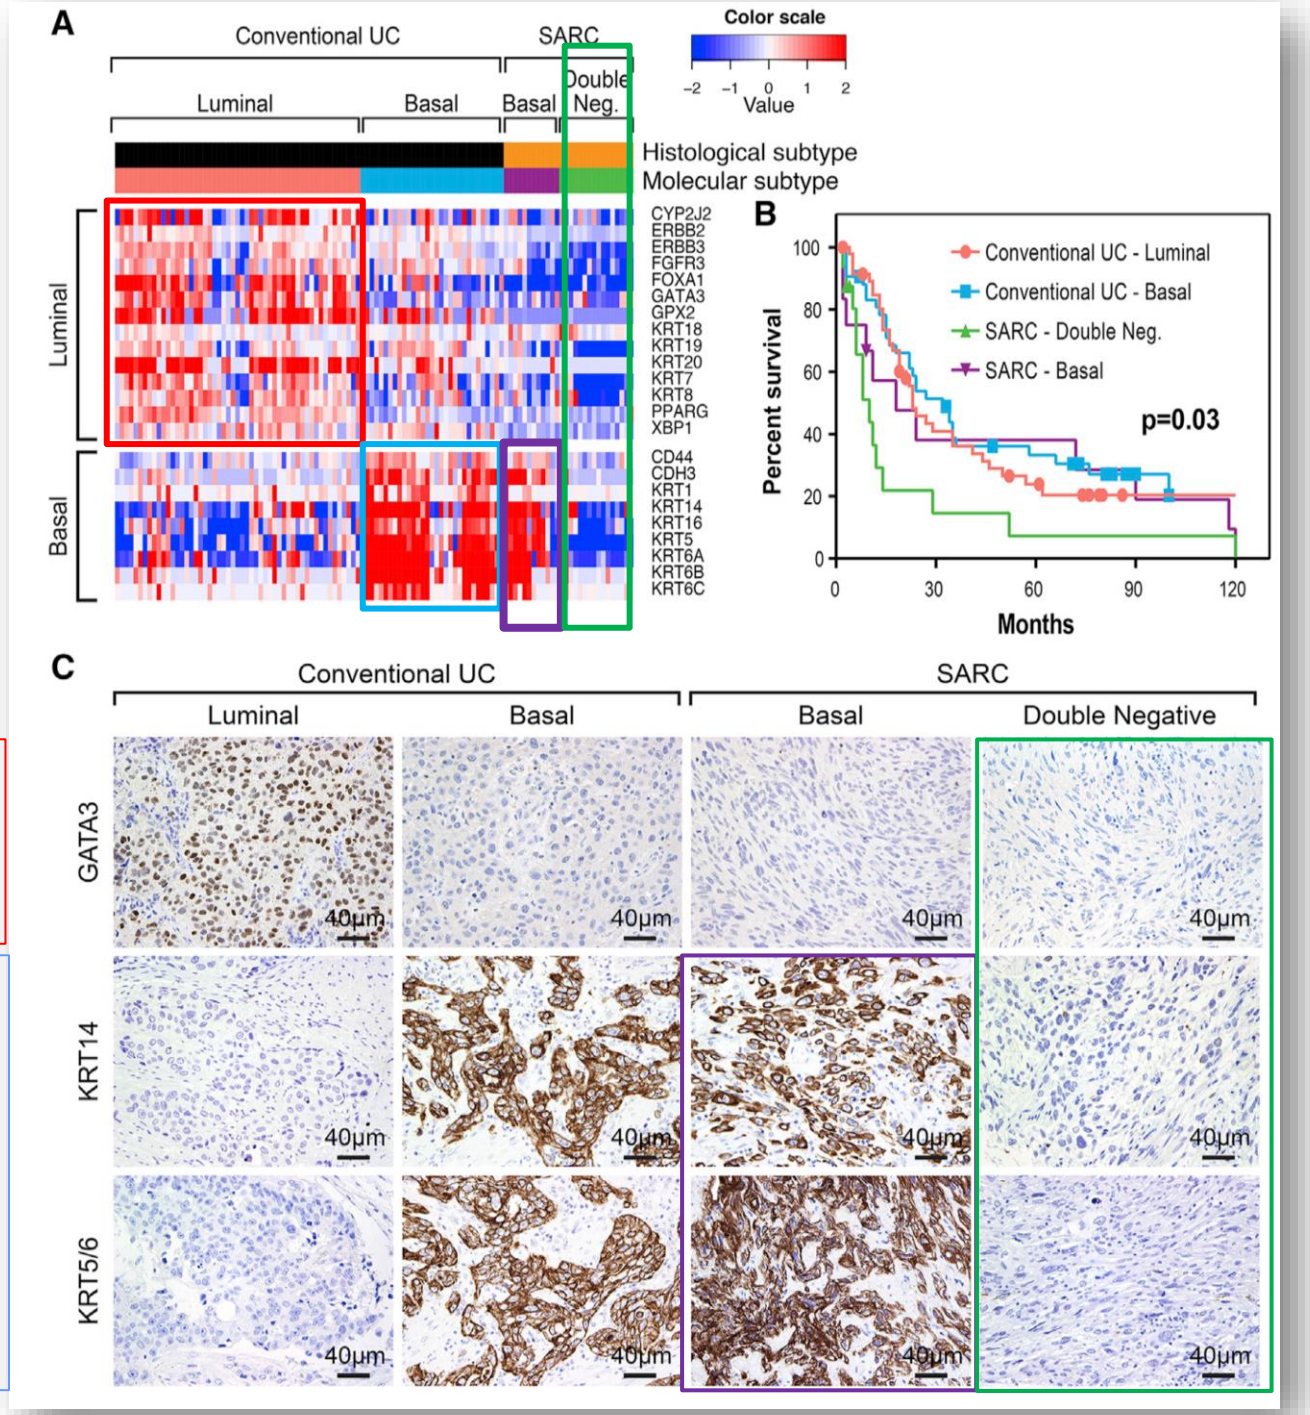
LUM IHC

BASAL IHC



Histopathology 2019, **75**, 865–875. DOI: 10.1111/his.13958

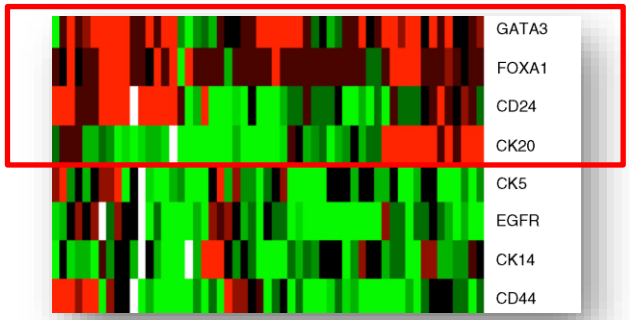
Distinct genetic alterations and luminal molecular subtype in nested variant of urothelial carcinoma

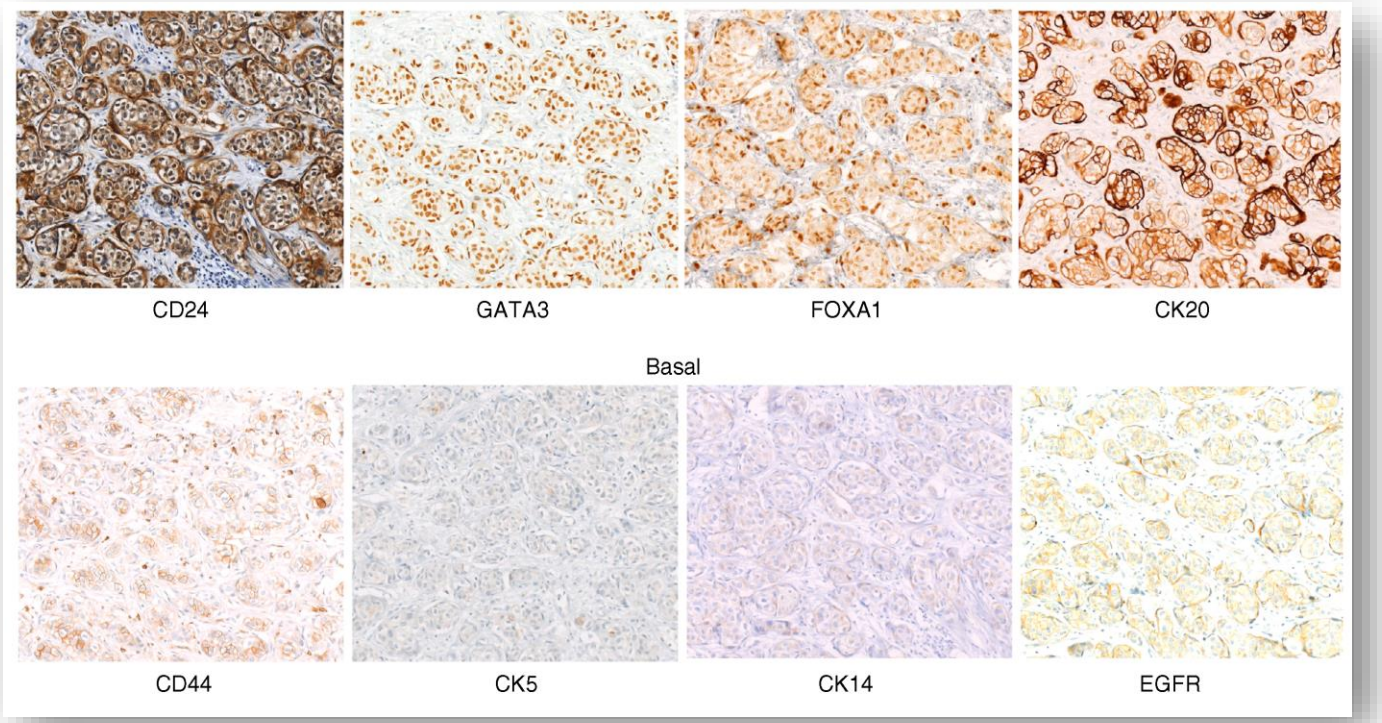
Veronika Weyerer,[1,*] Rebecca Weisser,[1,*] Evgeny A Moskalev,[1] Florian Haller,[1] Robert Stoehr,[1] Markus Eckstein,[1] Ulrike Zinnall,[1,2] Nadine T Gaisa,[3] Eva Compérat,[4] Aurel Perren,[5] Bastian Keck,[6,7] Yves Allory,[8] Glen Kristiansen,[9] Bernd Wullich,[6] Abbas Agaimy,[1] Arndt Hartmann[1] & Simone Bertz[1]

- 60 Nested UrCa
- **TERT** promoter mutation and **NGS panel of 48 genes** (in 26 cases)

- 62.5% TERT promoter mutations
- **TP53, JAK3 & CTNNB1** most frequently mutated

- All expressed **luminal markers**





Intratumoral Heterogeneity of Bladder Cancer by Molecular Subtypes and Histologic Variants

Joshua I. Warrick [a,b,], Gottfrid Sjödahl [c], Matthew Kaag [b], Jay D. Raman [b], Suzanne Merrill [b], Lauren Shuman [a], Guoli Chen [a], Vonn Walter [d], David J. DeGraff [a,b]*

Warrick JI et al, 2018 European Urology

- Molecular heterogeneity is frequent in BC particularly in **basal-squamous subtype**
- Concerns for **sampling representation** when guiding Rx

Bladder Cancer
A Review

Andrew T. Lenis, MD, MS; Patrick M. Lec, MD; Karim Chamie; MD, MSHS

American Urological Association risk group		
Low	**Intermediate**	**High**
Definitions		
Low-grade solitary Ta ≤3 cm PUNLMP	Recurrence within 1 y, low-grade Ta Solitary low-grade Ta >3 cm Low-grade Ta, multifocal High-grade Ta ≤3 cm Low-grade T1	High-grade T1 Any recurrent high-grade Ta High-grade Ta >3 cm or multifocal Any CIS Any BCG failure in patient with high-grade disease Any variant histology Any LVI Any high-grade prostatic urethral involvement
Outcomes[43]		
5-y relapse-free survival: 43%	5-y relapse-free survival: 33%	5-y relapse-free survival: 23%
5-y progression-free survival: 93%	5-y progression-free survival: 74%	5-y progression-free survival: 54%

JAMA. 2020;324(19):1980-1991.

WHO/ISUP System: Potential Advantages

- **Detailed definition of the various grades ⟹ greater interobserver reproducibility**
- **Acceptance by a broad spectrum of urological pathologists**
- **Patients with PUNLMP avoid a diagnosis of carcinoma**

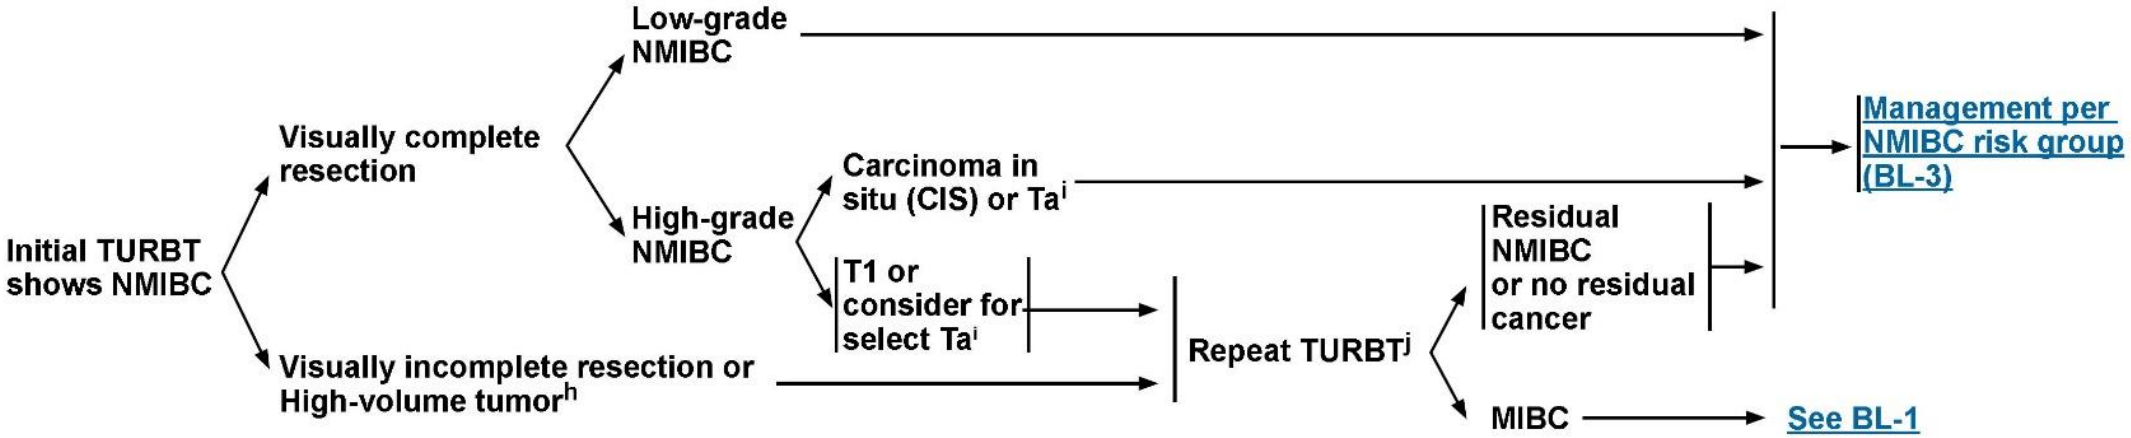
RISK STRATIFICATION OF NMIBC



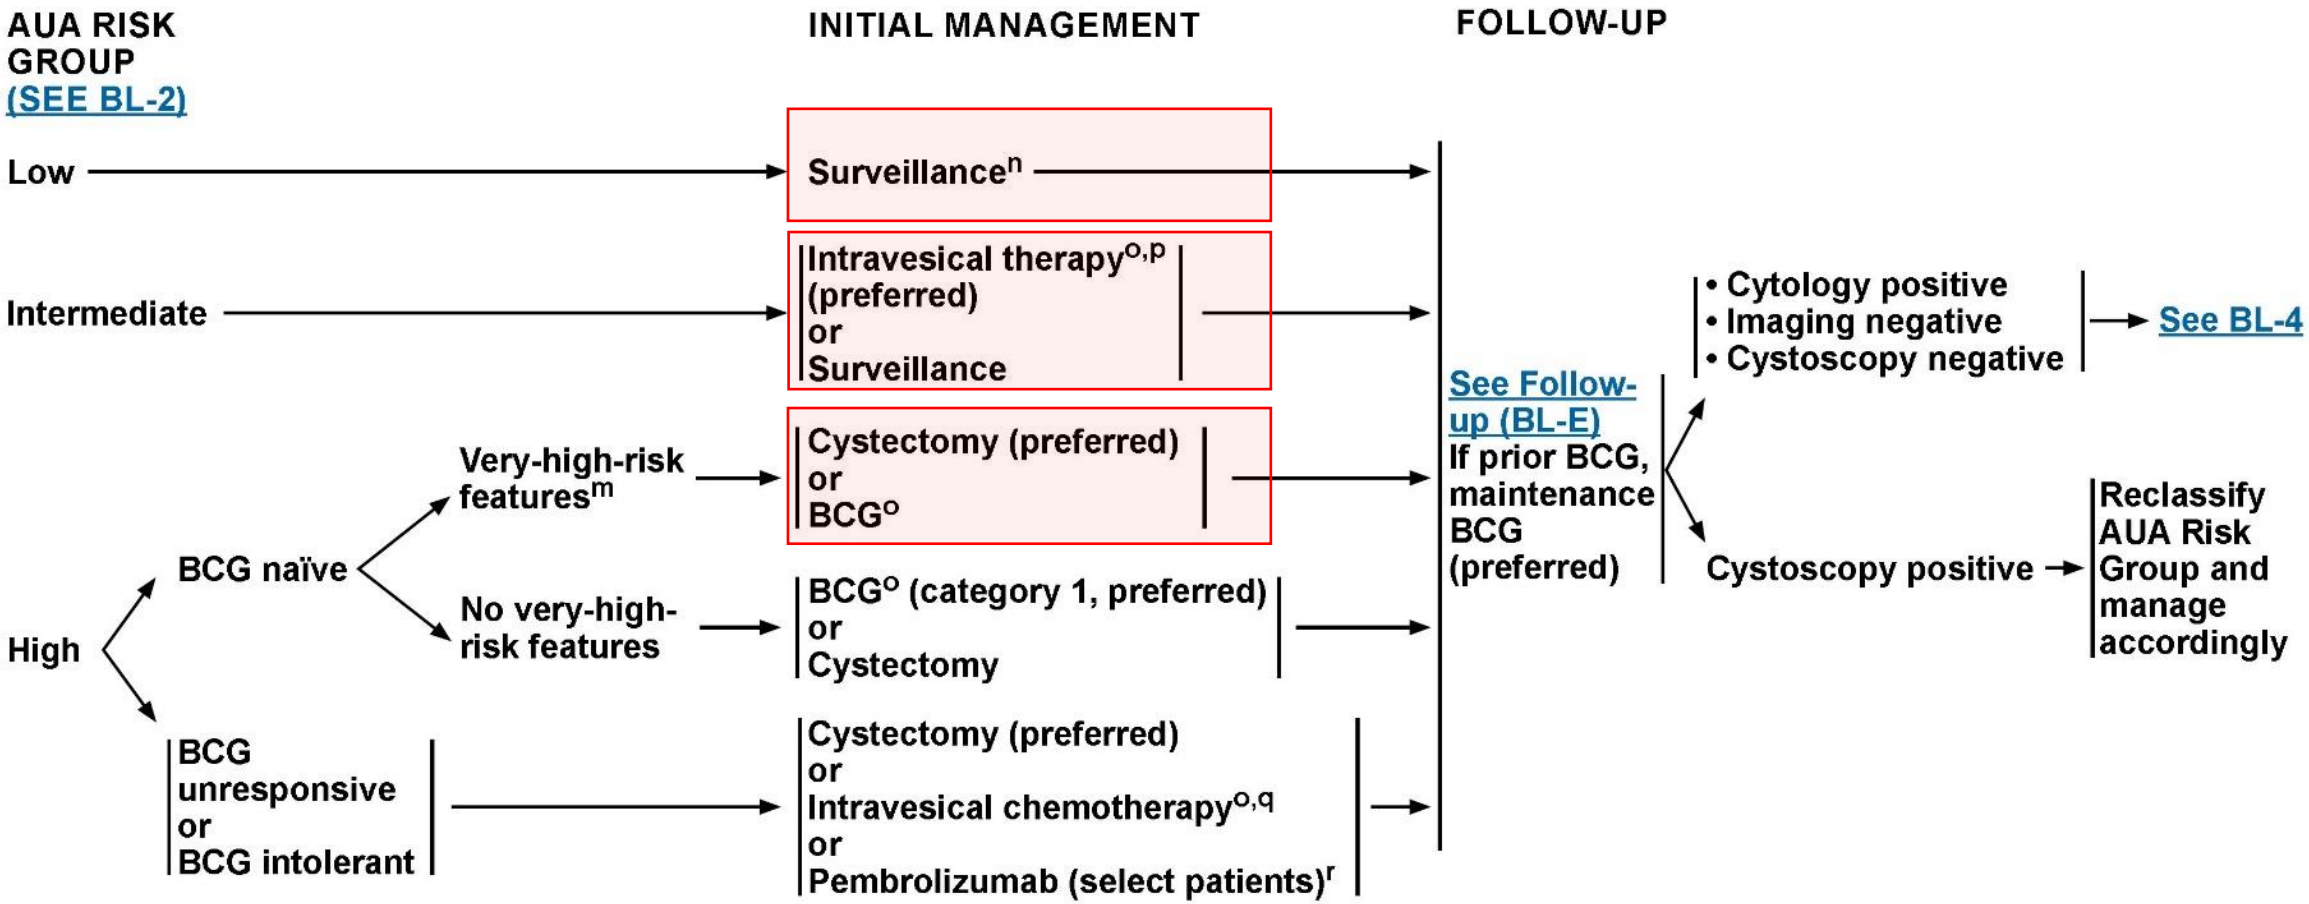
AUA Risk Stratification for Non-Muscle Invasive Bladder Cancer*

Low Risk	Intermediate Risk	High Risk
• Papillary urothelial neoplasm of low malignant potential • Low grade urothelial carcinoma ▸ Ta and ▸ ≤3 cm and ▸ Solitary	• Low grade urothelial carcinoma ▸ T1 or ▸ >3 cm or ▸ Multifocal or ▸ Recurrence within 1 year • High grade urothelial carcinoma ▸ Ta and ▸ ≤3 cm and ▸ Solitary	• High grade urothelial carcinoma ▸ CIS or ▸ T1 or ▸ >3 cm or ▸ Multifocal • Very high risk features (any): ▸ BCG unresponsive[k] ▸ Variant histologies[l] ▸ Lymphovascular invasion ▸ Prostatic urethral invasion

Reproduced with permission from Chang SS, Boorjian SA, Chou R, et al. Diagnosis and treatment of non-muscle invasive bladder cancer: AUA/SUO guideline. J Urol 2016;196:1021.
*Within each of these risk strata an individual patient may have more or less concerning features that can influence care.

NCCN Guidelines Version 5.2021
Non-Muscle Invasive Bladder Cancer

MANAGEMENT PER NMIBC RISK GROUP



Imaging

Computed tomography (CT) may be used to assess for extraluminal tumour spread and lymph node staging. Detection of upper urinary tract cancer with CT urography is superior to excretory urography {21512076}. To assess for muscle invasion, multiparametric (mp)-MRI, including diffusion weighted image (DWI) and dynamic contrast enhanced image (DCEI) in addition to T2 weighted image (T2WI) are preferred, as they enable differentiation of submucosal (or lamina propria) tissue from the muscularis propria. The vesical imaging of reporting and data system (VI-RADS) using mp-MRI proposes a five-point scale for staging, which suggests the likelihood of detrusor muscle and extravesical invasion of bladder cancer. T2 WI is defined as first pass images and DWI and DCEI as dominant images {29755006}. This system was tested positively by systematic review and meta-analysis {32199915; 33076505}. Using this system, select patients could avoid unnecessary secondary tumour resection
